to multipurpose sensors, microwaves, radio engineering, magnet technology for accelerators, magnetic energy storage, and power transmission on the 10⁹ watt scale. It is aimed primarily at the non-specialist and will be suitable as an introductory course book for those in the relevant fields and related industries. As shown in the title several examples of high-T_c applications are included. While low-T_c is still the leading technology, for instance, in cables and SQUIDS, case studies in these areas are presented. Contents: DC SQUID and Its Low-Frequency Applications (H Seppä et

corresponding approach to artificial lighting is a decisive factor in energy conservation. Assembled by experienced authors and experts from the worlds of practice and teaching, this new volume in the series Detail Practice provides an introduction to the most important aspects of natural and artificial lighting design. In addition to straightforward planning rules – such as ground plan design, building orientation, and the structuring of facades – it also introduces and explains current natural and artificial lighting systems with the help of example projects.

It provides answers to questions such as what is the best way to conduct interdisciplinary research on topics related to human health, behavior, and development? Which are the most successful interdisciplinary research programs in these areas? How do you identify appropriate collaborators? How do you find dedicated funding streams? How do you overcome peer-review and publishing challenges? This is the only book that provides answers directly from researchers who have carried out successful interdisciplinary programs. The editors give
