Logical Problems - Logical Reasoning Questions and Answers ...

Logical reasoning is the process of using rational and systematic series of steps to come to a conclusion for a given statement. The situations that ask for logical reasoning require structure, a relationship between given facts and chains of reasoning that are sensible. Because you have to study a problem objectively with logical reasoning, analysing is an important factor within the process. Logical reasoning starts with a proposition or statement.

argument is constructed by applying one of the forms of the different types of logical reasoning: deductive, inductive, and abductive. In deduction, the validity of an argument is determined solely by its logical form, not its content, whereas the soundness requires both validity and that all the given premises are actually true.
