This textbook discusses the most important theories of internationalization, including Product Life-Cycle, Internalization, Location, Eclectic Paradigm, Uppsala, Network, and International New Venture concepts. These models are grounded to a considerable extent in the Transaction Cost Theory and the Resource-Based View as explained and illustrated in the book. Relevant market entry strategies, such as franchising, contract manufacturing, joint ventures, and others are explained and categorized in light of crucial determinants of international business decision making: hierarchical control of operations, the firm's proximity to the foreign market, the investment risk, and the factor of time. What makes this textbook novel and unique? Its framework combines theories and market entry strategies: each topic is applied to authoritative, real-life business case studies. Complex issues are explained in a manner that results in understanding. Various illustrations and tables help the reader comprehend the point being discussed. The case study focus on Asian firms delivers interesting insights into modern high-technology industries and changing global business dynamics. Market Entry Strategies serves as a vital source for internationally oriented bachelor, master, and MBA programs with strategy, marketing, and management lecture modules. Consequently, this publication is highly recommended for students and scholars; but it is also useful for business practitioners seeking to gain competitive advantages in international business. About the Author Mario Glowik teaches Bachelor, MBA and Master courses in Strategic management, International management, Strategic management in China and Europe, and International and Asian business at Berlin School of Economics and Law in Berlin. Find out more about Professor Glowik and the second edition of his Textbook Market Entry Strategies on Youtube!

History is written by the winners--and the powerful--but how much of it is fiction? And who is really in control today? From the dawn of civilization to the 21st century, from ancient aliens to the New World Order, Secret History: Conspiracies from Ancient Aliens to the New World Order examines, explores, and uncovers the hidden, overlooked, and buried history of mankind. The book moves from biblical, Egyptian, Mayan, Greek, and early mysteries of antiquity to the clandestine doings of the Nazis and the Masons and assassination plots of the more recent past to the surveillance, monitoring, mind-control, and secret schemes of today. Researcher Nick Redfern investigates the stories, mythologies, lore behind incredible events and clandestine groups of yesterday and today. More than 60 entries dig deep into the manipulation of events by influential groups, including ... • Historical riddles-alien visitations, space gods, and human-alien crossbreeding. • Government cover ups-mind control, murders, scientists, and secret agents. • Powerful groups and intended consequences-9-11, new world order, bird-flu, and chemtrails. Tracing the chilling and lasting effects of conspiracies, cabals, and plots, Secret History: Conspiracies from Ancient Aliens to the New World Order exposes their deep reach in shaping today's world.

Limited, finite, contaminated, unavailable or expensive, water divides people all around the globe. We all cannot do without water for long, but can for long enough to fight for it. This commonsensical narration of water conflicts, however, follows a pattern of scarcity and necessity that is remarkably unvaried despite different social and geographical contexts. Through in-depth case studies from around the globe, this volume investigates this similarity of narration--confronting the power of a single story by taking it seriously instead of dismissing it. In so doing, it invites the reader to rethink water conflicts and how they are commonly understood and managed. This book: Posits the existence of the idea of water conflict, and asks what it is and what it produces, thus how it is used to pursue particular interests and to legitimize specific historical, technological and environmental relations; Examines the meaning and power of ideas as compared to other categories of knowledge, advancing theoretical frameworks related to environmental knowledge, discursive power, social constructivism; Presents an alternative agenda to deepen the conversation around water conflicts among scholars and activists. Of interest to scholars and activists alike, this volume is addressed to those involved with environmental conflicts, environmental knowledge and justice, disasters and climate change from the disciplinary angles of environmental anthropology and sociology, political ecology and economy, science and technology studies, human geography and environmental sciences, development and cooperation, public policy and peace studies. Essays by Gina Bloodworth, Ben Bowles, Patrick Bresnihan, Luisa Cortesi, Mattia Grandi, K. J. Joy, Midori Kawabe, Adrienne Kroepsch, Vera Lazzaretti, Leslie Mabon, Renata Moreno Quintero, Madhu Ramnath, Jayaprakash Rao Polanski, Dik Roth, Theresa Selva,Veronica Strang, Mieke van Hemert, Jeroen Warner, Madelinde Winnubst.

Discover how award-winning educator and author Chuck Williams does management like no one else with the latest edition of EFFECTIVE MANAGEMENT. MKTG4 continues to offer a unique blended solution for lecturers and students in introductory marketing subjects, in both University and Vocational sectors. Continuing to pave a new way to both teach and learn, MKTG4 is designed to truly connect with today's busy, tech-savvy student. Students have access to online interactive quizzing, videos, flashcards, games and more. An accessible, easy-to-read text with tear-out review cards completes a package that helps students to learn important concepts faster.

This book examines the forced displacement of public housing residents in Sydney's Millers Point and The Rocks communities. It considers the strategies deployed by the government to pressure tenants to move, and the social and personal impacts of the displacement on the residents themselves. Drawing on in-depth interviews with tenants alongside government and media communications, the Millers Point case study offers a penetrating and moving analysis of gentrification and displacement in one of Australia's oldest and more unique working class and public housing neighbourhoods. Gentrification and Displacement advances work in urban studies by charting trends in urban renewal and displacement, furthering our understanding of public housing, gentrification and the effects of forced relocation on vulnerable urban communities.

Public ownership is more widespread and popular in the United States than is commonly understood. This book is the most comprehensive and up-to-date analysis of the scope and scale of U.S. public ownership, debunking frequent misconceptions about the alleged inefficiency and underperformance of public ownership and arguing that it offers powerful, flexible solutions to current problems of inequality, instability, and unsustainability-- explaining why after decades of privatization it is making a comeback, including in the agenda of Jeremy Corbyn's Labour Party in Britain. Hanna offers a vision of deploying new forms of democratized public ownership broadly, across multiple sectors, as a key ingredient of any next system beyond corporate capitalism. This book is a valuable, extensively researched resource that sets out the past record and future possibilities of public ownership at a time when ever more people are searching for answers.

Using a three-part framework of Ideas, Arguments, and Contexts and Applications, International Relations, Second Edition, shows students how to think critically about issues and current events in world politics. Each chapter first describes key concepts and developments in the field (Ideas), then presents the main theoretical and analytical approaches (Arguments), and finally applies the main theories and approaches within the individual, state, and global contexts (Contexts and Applications). Historical information is woven throughout the text, and every chapter ends with an extended case study ("The Uses of History") that demonstrates how what we have learned from the past can influence our future actions. Three full chapters on key approaches--realism (chapter 2), liberalism (chapter 3), and constructivism and other alternative views (chapter 4)--introduce students to a broad spectrum of approaches, and each chapter integrates discussions of relevant theories and levels of analysis. Visual Reviews at the end of each chapter not only recap key points but include Critical Thinking questions that reflect the chapter learning objectives.

International Economics by Dominick Salvatore presents a comprehensive, up-to-date, and clear exposition of the theory and principles of international economics. Salvatore presents concepts that are essential for understanding, evaluating, and suggesting solutions to the important international economic problems and issues facing the United States and the rest of the world today and that they are likely to face in the coming years. Neither overly complex nor too simplistic, International Economics helps readers see the immediate relevance of the material and contains an unparalleled number of real-world applications and examples. This text is an unbound, three hole punched version.
