Figure 2.6.1. In addition, the absolute value of a real number can be defined algebraically as a piecewise function. $|a| = \begin{cases} a & \text{if } a \geq 0 \\ -a & \text{if } a < 0 \end{cases}$. Given this definition, $|3| = 3$ and $|-3| = -(-3) = 3$. Therefore, the equation $|x| = 3$ has two solutions for x , namely $\{\pm 3\}$.

Solving an Absolute Value Equation. Next, we will learn how to solve an absolute value equation. To solve an equation such as $|2x - 6| = 8$, $|2x - 6| = 8$, we notice that the absolute value will be equal to 8 if the quantity inside the absolute value bars is 8 or -8. This leads to two different equations we can solve ...

Solving Absolute Value Equations. Solving absolute value equations is as easy as working with regular linear equations. The only additional key step that you need to remember is to separate the original absolute value equation into two parts: positive and negative (\pm) components. Below is the general approach on how to break them down into two equations:

Solving Absolute Value Equations - ChiliMath

Absolute-value equations can be fairly simple when they contain only one absolute-value expression, and if that expression is linear. But these equations can have many more than just one expression in absolute-value bars, and the bars may contain expressions more complicated than mere straight lines.

Solving Harder Absolute-Value Equations | Purplemath

Absolute value equations are equations where the variable is within an absolute value operator, like $|x-5|=9$. The challenge is that the absolute value of a number depends on the number's sign: if it's positive, it's equal to the number: $|9|=9$. If the number is negative, then the absolute value is its opposite: $|-9|=9$.

Absolute Value Equations: How to solve absolute value ...

We're asked to solve for x . Let me just rewrite this equation so that the absolute values really pop out. So this is 8 times the absolute value of x plus 7 plus 4-- in that same color-- is equal to negative 6 times the absolute value of x plus 7 plus 6. Now the key here-- at first it looks kind of daunting. It's this complex equation.

Worked example: absolute value equation with two solutions ...

For most absolute value equations, you will write two different equations to solve. The value inside of the absolute value can be positive or negative. If the answer to an absolute value equation is negative, then the answer is the empty set. No absolute value can be a negative number.

How to Solve an Absolute Value Equation

Step 1: Isolate the absolute value $|3x - 6| - 9 = -3$ $|3x - 6| = 6$:
Step 2: Is the number on the other side of the equation negative? No, it's a positive number, 6, so continue on to step 3: Step 3: Write two equations without absolute value bars $3x - 6 = 6$: $3x - 6 = -6$: Step 4: Solve both equations $3x - 6 = 6$
