SWOT Analysis - Sustainable Improvement and Innovation

This book contains a collection of papers presented at a series of meetings organised by the Wessex Institute of Technology (WIT) dealing with sustainability, the environment and ecological issues. The complexity of the modern world presents new challenges to scientists and engineers that requires finding interdisciplinary solutions. Any problem solving carried out in the isolation of a particular field of expertise may give rise to a series of damaging effects which can create new and unintentional environmental and ecological problems. Specialisation, while required in our culture, needs to be kept under control by the understanding of the whole, which leads to the need of relying on interdisciplinary teams. Nowadays this can be easily achieved thanks to the massive advances in information technology which ensure continuous and immediate contact between all partners. This collaboration needs to be effective and to produce results that will lead to a better world. For this to happen, it is necessary that different groups of scientists and engineers acquire the necessary skills to be able to talk to each other. Furthermore, they need to understand the social and economic aspects of a given problem, in addition to the scientific and engineering issues involved. The Wessex Institute of Technology (WIT) has a long and very successful record in organising interdisciplinary conferences. The papers in this book are a reflection of the proceedings of some of those meetings.

The growth of the events industry brings with it concerns of sustainable management, the sharing of available resources, and ensuring that people and places are not over-exploited. While the environmental and economic dimensions of sustainability have attracted a reasonable attention in the study of events, the social and cultural aspects of sustainability have been largely neglected. This book brings together emerging critical perspectives, innovative conceptual frameworks and contemporary case studies. Events cannot be isolated from the actions of humans and this is reflected in the emphasis on people and society throughout. The next wave of sustainable discourse requires a critical synthesis of information and this book is the first to address the need for more critical approaches and a broader way of thinking about events and sustainability. Divided into five thematic parts, the contributions delve into understanding the mainstream stances towards sustainability, the role events play in indigenous cultures and in diasporic communities, and the extent to which events influence the public discourse and civic identity. Sustainability is also examined from a strategic perspective in the events sector, and consideration is given to issues such as corporate social responsibility, greenwashing, and the power of multi-stakeholder alliances in promoting sustainability goals. Written by leading academics, this timely and important volume will be valuable reading for all students, researchers and academics interested in Events and the global issue of Sustainability.
