The urinary system consists of the kidneys, ureters, urinary bladder, and urethra, which filter blood and subsequently produce, transport, store, and intermittently excrete urine (liquid waste). By eliminating fluid and waste, the urinary system regulates important physiological parameters, such as blood volume and consequently the blood pressure, the pH of the blood by eliminating acids and bases, and electrolyte balance by sophisticated mechanisms of reabsorption and excretion

temporary reservoir for the urine.

~~The Urinary System
Introduction, Functions and
Anatomy ...~~

Anatomical terminology. The urinary system, also known as the renal system or urinary tract, consists of the kidneys, ureters, bladder, and the urethra. The purpose of the urinary system is to eliminate waste from the body, regulate blood volume and blood pressure, control levels of electrolytes and metabolites, and regulate blood pH.
