Contemporary living in Amsterdam exhibits an unusual and fascinating dynamic. The collective lifestyle is changing as a result of economic prosperity, the shortage of urban space, general need for mobility, the firmly entrenched individualism and phenomena such as working from home and flexible working. Against this turbulent background, *Formats for Living* presents a concise picture of contemporary living in Amsterdam, with a provocative selection of almost one hundred floor plans designed in the final decade of the twentieth century. The uniform method of drawing has resulted in a lucid collection of plans, which for all their apparent simplicity contain an encrypted cultural code - a format for living.

Ditch cross training for crotch straining with this compendium of erotic exercises. Whether you 're a rookie romper or a seasoned sexpert, these drills are sure to get the juices flowing and keep you trim and toned. With space to list your achievements and log your lovemaking, this is the ultimate guide to getting f*cking fit!

implications for the future, answering key questions from the role of fossil fuels to the economic costs of reducing carbon emissions.

An application of differential forms for the study of some local and global aspects of the differential geometry of surfaces. Differential forms are introduced in a simple way that will make them attractive to "users" of mathematics. A brief and elementary introduction to differentiable manifolds is given so that the main theorem, namely Stokes' theorem, can be presented in its natural setting. The applications consist in developing the method of moving frames expounded by E. Cartan to study the local differential geometry of immersed surfaces in R^3 as well as the intrinsic geometry of surfaces. This is then collated in the last chapter to present Chern's proof of the Gauss-Bonnet theorem for compact surfaces.
