An astrophysicist is a scientist who researches the principles of light, motion, and natural forces as they pertain to the universe at large. Astrophysicists engage in theoretical physics studies in an attempt to learn more about the underlying properties of the cosmos. Many specialize in studying a particular phenomenon or theory, such as black holes, the development and extinction of stars, relativity and motion, or the origin of the universe.

While you wait for your morning coffee to brew, for the bus, the train, or a plane to arrive, *Astrophysics for People in a Hurry* will reveal just what you need to be fluent and ready for the next cosmic headlines: from the Big Bang to black holes, from quarks to quantum mechanics, and from the search for planets to the search for life in the universe.

Astrophysics for People in a Hurry: deGrasse Tyson, Neil ...

For the long term future, the *Astrophysics* goals will be guided based on the results of the 2010 Decadal survey *New Worlds, New Horizons in Astronomy and Astrophysics*. The priority science objectives chosen by the survey committee include: searching for the first stars, galaxies, and black holes; seeking nearby habitable planets; and advancing understanding of the fundamental physics of the ...

NASA Astrophysics | Science Mission Directorate

Astrophysics is a branch of space science that applies the laws of physics and chemistry to explain the birth, life and death of stars, planets, galaxies, nebulae and other objects in the universe....

What is Astrophysics? | Space

Astrophysics is a science that employs the methods and principles of physics in the study of astronomical objects and phenomena. Among the subjects studied are the Sun, other stars, galaxies, extrasolar planets, the interstellar medium and the cosmic microwave background. Emissions from these objects are examined across all parts of the electromagnetic spectrum, and the properties examined include luminosity, density, temperature, and chemical composition. Because astrophysics is a very broad su

Bath *Astrophysics* Group addresses fundamental questions about some of the most violent processes in the Universe, in particular black hole driven phenomena and their environments. We exploit ground and space-based technology to collect cosmic signals from distant objects and use this information to study galaxy dynamics, star formation, accretion of matter and the roles of black holes and ...
