inflammation 1. The inflammatory phase begins once the skin (and sometimes underlying tissues) is injured and continues for about 24 hours. The major characteristics of the inflammatory phase are skin color changes, heat, swelling, pain, and loss of function. This immune system reaction to an injury protects the body from infection and expedites healing.

ATI Skin and Wound Care is a major health care concern that affects many individuals with different types of wounds and consumes vast resources. The nurse observes a yellowish-tan, soft, stringy area of necrotic tissue formed in clumps and adhering firmly to the wound bed. An acute wound is caused by trauma from a sharp object.

Surrounding wound edges can become macerated because of the moisture contained in the dressing, and that can lead to enlargement of the wound ' s diameter. Cross-contamination is also an issue as the saturated gauze in wet-to-dry dressings does not provide any barrier to the environment, thus allowing organisms in and out of the wound easily.
