Alto raises \$45 million to expand into 10-plus cities, plans to be all-electric by 2023

The Audi A2 is one of those cars that was ahead of its time. When it came out prestige brands didn't do small hatchbacks, and as a consequence many people didn't know what to make of it.

There has been a dramatic shift towards more open, democratised, forms of innovation that are driven by networks of individual users. Users are now visibly active within all stages of the innovation process and across many types of industrial output, and their influence is spreading across many sectors. They are actively engaged with firms in the co-creation of products and services, and firms can no longer control the innovation agenda. This developing phenomenon has large implications for our understanding of the management of innovation. Drawing on practice-based insights, together with theoretical approaches developed in Innovation Studies and Science and Technology Studies, this book brings together a collection of recent work that examines key aspects of this emerging new model of innovation, while highlighting exciting new ideas in this area. With content contributed by academics, practitioners and researchers, this book is a good reference source for academics and general public interested in the management and policy implications of user innovation. Contents: Introduction: Perspectives on User Innovation (S Flowers & F Henwood) Exploring the Role(s) of Users in Innovation: The Historical Construction of User Innovation (G Voss) The Dynamics of User Innovation: Drivers and Impediments of Innovation Activities (C Raasch et al.) Intermediaries, Users and Social Learning in Technological Innovation (J Stewart & S Hyysalo) Drawing Users into the Innovation Process: User-Centric Innovations in New Product Development — Systematic

Identification of Lead Users Harnessing Interactive and Collaborative On-Line Tools (V Bilgram et al.) Proactive Involvement of Consumers in Innovation: Selecting Appropriate Techniques (K L Janssen & B Dankbaar) User-Producer Interactions in Emerging Pharmaceutical and Food Innovations (E H M Moors et al.) New Directions in User Innovation Research and Policy: Outlaw Community Innovations (C Schulz & S Wagner) User Innovation: The Developing Policy Research Agenda (S Flowers) The Freedom-Fighters: How Incumbent Corporations are Attempting to Control User-Innovation (V Braun & C Herstatt) Readership: Students, academics and researchers studying and teaching innovation management, managers dealing with innovation processes and new product development in companies. Keywords: User-Driven; Innovation; New Product Development; STS; Social Learning; Collaborative Online Tools Key Features: Presents the latest research findings into the ways in which users participate in innovation Offers new insights concerning the practice, management and policy implications of user innovation Combines practice-based insights and theoretical approaches

The selection of automobile body materials is fundamental to the choice of fabrication method, and the characteristics and performance of the final vehicle or component. The factors behind these choices comprise some of the key technological and design issues facing automotive engineers today. *Materials for Automobile Bodies* presents detailed up-to-date information on material technologies for the automobile industry, embracing steels (including high-strength steels) aluminium, plastics, magnesium, hydro-forming and composite body panels. Coverage also includes: materials processing; formability; welding and joining; anti-corrosion technologies; plus a comprehensive consideration of the implications of materials selection on these processes. Dealing with the whole assembly process from raw material to production, right through to recycling at the end of a vehicle's life, this book is the essential resource for practising engineers, designers, analysts and students involved in the design and specification of motor vehicle bodies and components. \* Up-to-date information on contemporary autobody materials \* International case studies, examples and terminology \* Fully illustrated throughout, with examples from Honda, Ferrari, Lotus, BMW and Audi

This book on advanced functional textiles and polymers will offer a comprehensive view of cutting-edge research in newly discovered areas such as flame retardant textiles, antimicrobial textiles, insect repellent textiles, aroma textiles, medical-textiles, smart textiles, and nano-textiles etc. The second part the book provides innovative fabrication strategies, unique methodologies and overview of latest novel agents employed in the research and development of functional polymers.

Research into the manufacture of lightweight automobiles is driven by the need to reduce fuel consumption to preserve dwindling hydrocarbon resources without compromising other attributes such as safety, performance, recyclability and cost. *Materials, design and manufacturing for lightweight vehicles* will make it easier for engineers to not only learn about the materials being considered for lightweight automobiles, but also to compare their characteristics and properties. Part one discusses materials for lightweight automotive structures with chapters on advanced steels for lightweight automotive structures, aluminium alloys, magnesium alloys for lightweight powertrains and automotive structures, thermoplastics

and thermoplastic matrix composites and thermoset matrix composites for lightweight automotive structures. Part two reviews manufacturing and design of lightweight automotive structures covering topics such as manufacturing processes for light alloys, joining for lightweight vehicles, recycling and lifecycle issues and crashworthiness design for lightweight vehicles. With its distinguished editor and renowned team of contributors, Materials, design and manufacturing for lightweight vehicles is a standard reference for practicing engineers involved in the design and material selection for motor vehicle bodies and components as well as material scientists, environmental scientists, policy makers, car companies and automotive component manufacturers. Provides a comprehensive analysis of the materials being used for the manufacture of lightweight vehicles whilst comparing characteristics and properties Examines crashworthiness design issues for lightweight vehicles and further emphasises the development of lightweight vehicles without compromising safety considerations and performance Explores the manufacturing process for light alloys including metal forming processes for automotive applications
