You will start from basic C++ exercises to more complex exercises. The solution is provided for each exercise. You should try to solve each problem by yourself first before you check the solution.

C++ exercises and solutions programming
Dynamic Programming is a method for solving a complex problem by breaking it down into a collection of simpler subproblems, solving each of those subproblems just once, and storing their solutions using a memory-based data structure (array, map,etc). Each of the subproblem solutions is indexed in some way, typically based on the values of its input parameters, so as to facilitate its lookup.
