(Key topics: static electricity, electric charge, lightening, electric potential, electric current, Ohms Law, Humphry Davy, sodium metals, lithium, sodium, beryllium, magnesium, calcium, strontium, barium, radium, periodic laws) IPC consists of twelve chapters of text and twelve companion student activity books. This course introduces students to the people, places and principles of physics and chemistry. It is written by internationally respected scientist/author, John Hudson Tiner, who applies the vignette approach which effectively draws readers into the text and holds attention. The author and editors have deliberately avoided complex mathematical equations in order to entice students into high school level science. Focus is on the people who contributed to development of the Periodic Table of the Elements. Students learn to read and apply the Table while gaining insight into basic chemistry and physics. This is one of our most popular courses among high school students, especially those who have a history of under-performance in science courses due to poor mathematical and reading comprehension skills. The course is designed for two high school transcript credits. Teachers may require students to complete all twelve chapters for two transcript credits or may select only six chapters to be completed for one transcript credit for Physical Science, Physics, or Chemistry. Compliance with state and local academic essential elements should be considered when specific chapters are selected by teachers. As applicable to local policies, transcript credit may be assigned as follows when students complete all 12 chapters: Physical Science for one credit and Chemistry for one credit, or Integrated Physics and Chemistry for two credits. (May require supplemental local classes/labs.)

Published by OpenStax College, U.S. History covers the breadth of the chronological history of the United States and also provides the necessary depth to ensure the course is manageable for instructors and students alike. U.S. History is designed to meet the scope and sequence requirements of most courses. The authors introduce key forces and major developments that together form the American experience, with particular attention paid to considering issues of race, class and gender. The text provides a balanced approach to U.S. history, considering the people, events and ideas that have shaped the United States from both the top down (politics, economics, diplomacy) and bottom up (eyewitness accounts, lived experience).

Designed for use in a second course on linear algebra, Matrix Theory and Applications with MATLAB covers the basics of the subject-from a review of matrix algebra through vector spaces to matrix calculus and unitary similarity-in a presentation that stresses insight, understanding, and applications. Among its most outstanding features is the integration of MATLAB throughout the text. Each chapter includes a MATLAB subsection that discusses the various commands used to do the computations in that section and offers code for the graphics and some algorithms used in the text. All of the material is presented from a matrix point of view with enough rigor for students to learn to compose arguments and proofs and adjust the material to cover other problems. The treatment includes optional subsections covering applications, and the final chapters move beyond basic matrix theory to discuss more advanced topics, such as decompositions, positive definite matrices, graphics, and topology. Filled with illustrations, examples, and exercises that reinforce understanding, Matrix Theory and Applications with MATLAB allows readers to experiment and visualize results in a way that no other text does. Its rigor, use of MATLAB, and focus on applications better prepares them to use the material in their future work and research, to extend the material, and perhaps obtain new results of their own.

That the Gospels are the writings of their traditional Apostolic authors was long held to be settled truth. It was also long held that Matthew was first and as early as the 40sAD, followed by Mark and Luke, and lastly by John, and that all were written before about 70AD. These views have been doubted or denied by New Testament scholars from about the end of the 18thCentury. The dominant view is that the Gospels were not written by eyewitnesses, though they depend on material that may go back to eyewitnesses. Mark is said to have been written first and not much before 70AD. Matthew and Luke are later and depend on Mark and some unknown sources. John is last, follows an independent tradition, and could be as late as 100AD. The reason for this change of views is the so-called historical critical method, which claims to be scientific and up to date in literary criticism and the detection of different temporal layers in written texts. The method also assumes that reports of miracles and other supernatural phenomena are not historical but later inventions added for religious purposes. This book shows that the historical critical method is not historical or critical or even a method. For the method assumes but cannot prove that supernatural happenings are unhistorical; it ignores the historical evidence about the origin and authorship of the Gospels; its literary criticism is unimaginative and its application of it to questions of dating arbitrary. There is no reason to accept its results as well founded or even believable. The traditional dating and authorship of the Gospels is the only account that makes sense. Nevertheless, elements of the historical critical method have a legitimate use if they are applied fairly and taken along with the historical evidence and the fact (well established by eyewitnesses) of supernatural realities. When these elements are so used they can be shown to give plausible and defensible accounts of the origin, in particular, of the Gospels of Mark and Luke, which, along with Matthew, show signs of dependence and overlap. If the historical evidence is taken seriously, and if literary criticism is applied fairly, a plausible account can be given of the origin in particular of the Gospel of Mark, of how it arose from the preaching of Peter relative to the older Gospel of Matthew and to the newer Gospel of Luke sponsored by the Apostle Paul. This alternative account of the origins of Mark and Luke is a fine example of how historical evidence and literary criticism can be used to explain otherwise puzzling phenomena. This account is perhaps not tthe only one to save all the phenomena. But it shows how the traditional authorship and dating of the Gospels, contrary to the historical critical method, make excellent sense of all the phenomena: literary, historical, and rational. The traditional view about the Gospels is the only sensible view to adopt.
