Engineering

Design is a ubiquitous word: We see it often and in many different contexts. For example, just in perusing our daily newspapers, we read about people who are automobile designers, dress designers, architectural designers, sound-system designers, aircraft designers, organization designers, highway designers, system designers, and so on and so forth.

https://en.wikipedia.org/wiki/Engineering_disasters.

Shortcuts in engineering design can lead to engineering disasters. Engineering is the science and technology used to meet the needs and demands of society. These demands include buildings, aircraft, vessels, and computer software. In order to meet society 's demands, the creation of newer technology and infrastructure must be met efficiently and cost-effectively.

Abstract: Any design is a process of risk management – organising resources so as to maximise the potential for success and minimise the potential for loss. Much of the time, the engineer is concerned with safety, durability and serviceability; for the user, this translates to reliable and cost-effective service in support of the building ' s function.
