The van der Waals equation is $(P + \frac{a n^2}{V^2})(V - nb) = nRT$ where P = pressure V = volume a = pressure correction constant unique to the gas b = volume correction constant unique to the gas n = the number of moles of gas T = absolute temperature The van der Waals equation includes a pressure and volume correction to take into account the interactions between molecules. Unlike ideal gases, the individual particles of a real gas have interactions with each other and have definite volume.
