Presents 16 sessions and activities for children to practice recognizing feelings and physical reactions to anxiety in different situations.

Kendall and Braswell have designed and developed specific procedures that can improve children's self-control and reduce their impulsivity. In this second edition, the authors both expand and focus the application of their program, involving parents and teachers to a greater extent, making greater use of hands-on workbook materials, and adapting and implementing procedures for children with a wide range of behavior problems linked to impulsivity. The present edition also provides, in greater detail, descriptions of treatment strategies, in-session therapy materials, case examples, and illustrative transcripts. This book will be of great value to child and family psychologists, social workers, educators, and psychiatrists, as well as parents, pediatricians, classroom teachers, and others who frequently encounter impulsive children. This book also serves as an excellent ancillary text for courses in clinical child psychology, school psychology, educational interventions, applied developmental psychology, and other mental health related classes.

Treatment manual describing a 16-session program for the treatment of anxiety disorders, specifically generalized anxiety disorder, social phobia, and separation anxiety disorder, in children and young adolescents. Treatment's goal is to teach children to recognize signs of unwanted anxious arousal and to follow that recognition with the use of anxiety management strategies.

This program is an evidence based intervention for behavioral in pre-adolescent children (grades 5 and 6). Continuing the work of the Fast Track Program, currently under contract, this intervention targets children who are beginning to show signs of severe aggression and social dysfunction at school. Children who begin to exhibit aggression as pre-adolescents are much more likely to have histories of substance abuse, interpersonal violence, and criminal behavior in their adolescence. By targeting these children before their behavior has become extremely dangerous or unmanageable, this program has been proven to reduce the occurrence of these problems, and to improve functioning in school. Studies have shown that children who demonstrate aggressive behaviors have maladaptive coping skills and misperceptions of conflict or threat. This program teaches positive strategies for coping with perceived conflict or threat, as well as an understanding of the participant's feelings and motivations behind inappropriate behaviors. The Coping Power program involves an intervention with aggressive children and a simultaneous program for their parents, to increase positive motivations at home as well as at school. The facilitator's guides include step-by step instructions for accurately implementing this evidence-based program. This is the corresponding workbook for parents which includes worksheets and monitoring forms to track progress and reinforce the skills learned in the group sessions.

Presents sessions, lessons and take-home activities for teens with anxiety, in order to examine the emotions and physical feelings that occur in different situations.

This new edition of Cognitive Behavioral Therapy with Children links together the methods of cognitive behavioral therapy (CBT) practiced in academic centers as well as the community. This book addresses the challenges community practitioners face when pressured to use CBT with youth who live with mental health disorders, but whose circumstances differ from those in research settings. Practitioners will learn how

to overcome therapeutic obstacles. This new edition contains an expanded discussion on cultural considerations relevant to assessment and treatment, as well as a new chapter on training others in CBT for children.

Help your child face all of life's challenges with confidence. Based on the innovative Coping Cat program, this book offers a proven-effective "recipe" for raising resilient kids! We live in an age of anxiety. Amidst climate change and natural disasters, a troubled economy, and one of the largest global pandemics in modern history—is it any wonder our kids are anxious and stressed out? Add in the pressures inherent in social media and consumerist culture, as well as the pressure of academic success, and you've got a recipe for disaster. The good news is that you can help your child manage anxiety and stress—no matter what life throws their way. This book will show you how. Written by two pioneering experts in child psychology and anxiety, *The Resilience Recipe* offers an evidence-based plan grounded in cognitive behavioral therapy (CBT) to help kids build emotional resilience and adaptability, worry less, and thrive—despite the stressors of modern life. With this guide, you'll learn to help kids feel more in control of their moods and emotions; cope with difficult experiences; and recognize the first signs of stress and anxiety in both their mind and body, so they can find quick relief. You'll also discover a wealth of tips and strategies to help you manage your own anxiety. Most importantly, you'll find a solid action plan to help your child feel strong and capable in the face of unprecedented challenges.

Among mental health researchers, there is a consensus that empirically supported treatments (ESTs) have favorable outcomes and that the outcomes are typically better than other approaches. The majority of these are available as therapist manuals, brief books, or other extended volumes. However, among mental health service providers, there is often a view that these manuals and books can be formulaic and rigid, and likely insensitive to individual patient needs or presentations. With these conflicting perspectives in place, there is a need for accurate communication and reconciliation. *Flexibility within Fidelity* identifies how effective ESTs can be implemented with both integrity and flexibility. The book is comprised of chapters focusing on specific ESTs for identified problem areas amongst adults and children/adolescents, including anxiety disorders, PTSD, pain management, and depression among others. Chapter authors focus on the specific treatment components that are required to maintain fidelity and the features of the EST which can be applied with flexibility, promoting a personalized implementation. Written in an accessible style featuring in-depth clinical discussions, this book will equip mental health practitioners with the tools to implement ESTs across client presentations.
