~~Guidelines — Neurocritical Care Society~~

Patients requiring mechanical ventilation in the intensive care unit (ICU) usually require a sedating agent [1]. Sedation reduces the negative physiological effects of the stress response to mechanical ventilation [2, 3] and may reduce the psychological issues patients may face after critical illness [4].

~~Sedation practice in the intensive care unit: a UK~~

Access Free Critical Care Guidelines Sedation

Sedation and analgesia are essential components of care for many mechanically ventilated patients in the intensive care unit (ICU). To choose an optimal strategy of medication use, it is necessary to understand the body of literature that forms the groundwork for evidence-based recommendations (1).

~~American Journal of
Respiratory and Critical
Care Medicine~~

Sedation and analgesia outside the operation theatre is a dynamic and systematic procedure intended to achieve the goals of optimum critical
