The guidelines include updated evidence on screening and referral criteria, the minimum requirements for a screening vision and retinal examination, follow-up care, and management of DR and DME, including laser photocoagulation and appropriate use of intravitreal anti-vascular endothelial growth factor inhibitors and, in specific situations, intravitreal corticosteroids.

Guidelines on Diabetic Eye Care: The International Council...

1 / 1. Diabetic retinopathy, one of the complications of diabetes (others being vascular disease, renal failure and leg amputation) is an important cause of avoidable blindness globally. The risk of diabetic retinopathy (DR) increases with increasing duration of diabetes and poor control of blood glucose, cholesterol and high blood pressure. DR cannot be entirely prevented, but the severe stages which are sight threatening can be reduced by improved control of risk factors.
