The process of manipulating digital images with a computer is called as digital image processing. Pixel: In a digital image, all the coordinates on 2-d function and the corresponding values are finite. Each value available in every location is considered as a pixel. In other words, a pixel is the smallest part of an image.

A common form of digital processing that can be used to produce a blurred image is just by replacing each pixel value with the average of the pixel values in it's neighborhood.

This produces a "blurred mask" image. The blurring removes all detail from the image (that is what blurring does!). We now have two images.

~~Digital Image Processing~~ — SPRAWLS

Digital imaging or digital image acquisition is the creation of a representation of the visual characteristics of an object, such as a physical scene or the interior structure of an object.
