Conversion of analog signal to digital signal:
The output of most of the image sensors is an analog signal, and we can not apply digital processing on it because we can not store it. We can not store it because it requires infinite

Access Free Digital Image

memory to store a signal that can have infinite values. So we have to convert an analog signal into a digital signal.

Concept of Sampling - Tutorialspoint

Image processing mainly include the following steps:

- 1.Importing the image via image acquisition tools;
- 2.Analysing and

Access Free Digital Image

manipulating the image;
3. Output in which result
can be altered image or
a report which is based
on analysing that image.
