Finite Discrete Math Problems and Solutions

Discrete Mathematics is about mathematical structures. It is about things that can have distinct discrete values. Discrete mathematical structures are also known as Decision Mathematics or Finite Mathematics. This is very popularly used in computer science for developing programming languages, software development, cryptography, algorithms etc.

Solution. The characteristic equation of the recurrence relation is $x^2 - 5x + 6 = 0$, So, $(x - 3)(x - 2) = 0$. Hence, the roots are $x_1 = 3$ and $x_2 = 2$. The roots are real and distinct. So, this is in the form of case 1. Hence, the solution is $y_n = c_1 3^n + c_2 2^n$.
