In *Governing the Dead*, Linh D. Vu explains how the Chinese Nationalist regime consolidated control by honoring its millions of war dead, allowing China to emerge rapidly from the wreckage of the first half of the twentieth century to become a powerful state, supported by strong nationalistic sentiment and institutional infrastructure. The fall of the empire, internecine conflicts, foreign invasion, and war-related disasters claimed twenty to thirty million Chinese lives. Vu draws on government records, newspapers, and petition letters from mourning families to analyze how the Nationalist regime's commemoration of the dead and compensation of the bereaved actually fortified its central authority. By enshrining the victims of violence as national ancestors, the Republic of China connected citizenship to the idea of the nation, promoting loyalty to the "imagined community." The regime constructed China's first public military cemetery and hundreds of martyrs' shrines, collectively mourned millions of fallen soldiers and civilians, and disbursed millions of yuan to tens of thousands of widows and orphans. The regime thus exerted control over the living by creating the state apparatus necessary to manage the dead. Although the Communist forces prevailed in 1949, the Nationalists had already laid the foundation for the modern nation-state through their governance of dead citizens. The Nationalist policies of glorifying and compensating the loyal dead in an age of catastrophic destruction left an important legacy: violence came to be celebrated rather than lamented.

While Americans are generally aware of China's ambitions as a global economic and military superpower, few understand just how deeply and assertively that country has already sought to influence American society. As the authors of this volume write, it is time for a wake-up call. In documenting the extent of Beijing's expanding influence operations inside the United States, they aim to raise awareness of China's efforts to penetrate and sway a range of American institutions: state and local governments, academic institutions, think tanks, media, and businesses. And they highlight other aspects of the propagandistic "discourse war" waged by the Chinese government and Communist Party leaders that are less expected and more alarming, such as their view of Chinese Americans as members of a worldwide Chinese diaspora that owes undefined allegiance to the so-called Motherland. Featuring ideas and policy proposals from leading China

specialists, *China's Influence and American Interests* argues that a successful future relationship requires a rebalancing toward greater transparency, reciprocity, and fairness. Throughout, the authors also strongly state the importance of avoiding casting aspersions on Chinese and on Chinese Americans, who constitute a vital portion of American society. But if the United States is to fare well in this increasingly adversarial relationship with China, Americans must have a far better sense of that country's ambitions and methods than they do now.

This comprehensive report focuses on the fact that millions of people in poor countries remain uneducated and illiterate - which prevents them from developing the skills they need to escape poverty. The book looks at the underlying causes of the problem and sets out a clear agenda for reform.

This first-of-its-kind book for underrepresented racial and ethnic minorities (URM), women, and sexual and gender minorities in medicine offers the core knowledge and skills needed to achieve a well-planned, fulfilling career in academic medicine. The knowledge and skills provided by the esteemed co-authors, successful diverse pre-faculty, and junior and senior academicians, are complemented by their inspirational and motivational stories. Increasing diversity in the academic medicine workforce has been identified and embraced as a core value of institutional excellence at nearly all academic institutions and professional associations. Despite this established core value, certain groups such as Black/African-American, Latino/Hispanic, American Indian/Alaska Native-identified individuals, women, and sexual and gender minorities, are still present in lower proportions compared with the general population and lack inclusion. In 12 chapters and with a unique focus on a practical approach to increasing diversity and inclusion in academic medicine, this book demystifies the often-insular world of academic medicine. It comprehensively outlines career opportunities and associated responsibilities, how to transform academic-related work to scholarship, and offers a clear and transparent look into the academic appointment and promotion process. By focusing on the practical steps described in this handy book, students and residents can develop a strong foundation for an academic medicine career and succeed in becoming the next generation of diverse faculty and administrators.

This textbook covers the material for an undergraduate linear algebra course: vectors, matrices, linear transformations, computational techniques, geometric constructions, and theoretical foundations. The explanations are given in an informal conversational tone. The book also contains 100+ problems and exercises with answers and solutions. A special feature of this textbook is the prerequisites chapter that covers topics from high school math, which are necessary for learning linear algebra. The presence of this chapter makes the book suitable for beginners and the general audience-readers need not be math

experts to read this book. Another unique aspect of the book are the applications chapters (Ch 7, 8, and 9) that discuss applications of linear algebra to engineering, computer science, economics, chemistry, machine learning, and even quantum mechanics.

China has emerged as an economic powerhouse with an increasing role on the world stage. China's Rise will help the United States comprehend the facts and dynamics underpinning China's rise--an understanding that becomes more important with each passing day. Filled with facts for policymakers, this much-anticipated book's accessible style will also appeal to the general reader through its relevant discussion of China's foreign policy, military modernization, economic growth, and energy and the environment.

What happened to veterans of the nations involved in the world wars? How did they fare when they returned home and needed benefits? How were they recognized--or not--by their governments and fellow citizens? Where and under what circumstances did they obtain an elevated postwar status? In this sophisticated comparative history of government policies regarding veterans, Martin Crotty, Neil J. Diamant, and Mark Edele examine veterans' struggles for entitlements and benefits in the United States, the United Kingdom, Japan, Taiwan, the Soviet Union, China, Germany, and Australia after both global conflicts. They illuminate how veterans' success or failure in winning benefits were affected by a range of factors that shaped their ability to exert political influence. Some veterans' groups fought politicians for improvements to their postwar lives; this lobbying, the authors show, could set the foundation for beneficial veteran treatment regimes or weaken the political forces proposing unfavorable policies. The authors highlight cases of veterans who secured (and in some cases failed to secure) benefits and status after wars both won and lost; within both democratic and authoritarian polities; under liberal, conservative, and even Leninist governments; after wars fought by volunteers or conscripts, at home or abroad, and for legitimate or subsequently discredited causes. Veterans who succeeded did so, for the most part, by forcing their agendas through lobbying, protesting, and mobilizing public support. *The Politics of Veteran Benefits in the Twentieth Century* provides a large-scale map for a research field with a future: comparative veteran studies.

Includes the decisions of the Supreme Courts of Missouri, Arkansas, Tennessee, and Texas, and Court of Appeals of Kentucky; Aug./Dec. 1886-May/Aug. 1892, Court of Appeals of Texas; Aug. 1892/Feb. 1893-Jan./Feb. 1928, Courts of Civil and Criminal Appeals of Texas; Apr./June 1896-Aug./Nov. 1907, Court of Appeals of Indian Territory; May/June 1927-Jan./Feb. 1928, Courts of Appeals of Missouri and Commission of Appeals of Texas.

Learning English and Chinese is becoming increasingly important to the prospects of young people. This book compares English as a Foreign

Language teaching in Taiwan with Chinese as a Foreign Language education in England in order to highlight how classroom activities are embedded within multiple settings, including ethnic or other social group cultures, family and community resources and school visions or goals. The book illustrates how in Taiwan different ethnic groups recognise, access and value English language learning to varying extents. Its findings illuminate why some ethnic groups are highly motivated to learn English and are able to gain privileged economic positions in the job market. In England, access to Chinese is marked by social class, and the book argues that this could augment an 'educational apartheid' that already exists in language teaching in secondary schools, thereby exacerbating existing inequality.

The Department of Health and Human Services has identified Acquired Immunodeficiency Syndrome (AIDS) as the foremost public health problem in the United States. The Centers for Disease Control (CDC) report that, as of December 31, 1994, there were 441,528 documented cases of AIDS in this country, and the number is increasing. AIDS is an illness characterized by a defect in natural immunity against disease. Many more individuals are known to be infected with Human Immunodeficiency Virus (HIV) but do not have symptoms or the defining characteristics of AIDS. The incubation period for AIDS may range from 1 to 10 or more years in adults and 6 months to several years in children. Infected persons appear to be capable of transmitting infection indefinitely, even if they remain asymptomatic. In order to increase the number of minority investigators conducting research on HIV infection and AIDS, NIMH conducted a 3h-day technical workshop for minority investigators on July 24-27, 1990, in Fairlakes, Virginia. University-based research programs were asked to nominate investigators who were selected on the basis of a referred 10-page prospectus for a proposed research project. This procedure was used because NIMH wanted to be sure that the prospective investigators were established in a research environment that would pr
