About Earth Interstelllar: Proxy War by Scott Olen Reid. Earth ' s first interstellar war is a non-stop rollercoaster ride of action, technology, and hidden agendas. When Commander Mary Kree and the XSS Cousteau make First Contact with the Rheas, a pre-space flight alien race, it creates an opportunity for humanity to finally become the dominant partner in an interstellar relation after 300 years of paying tribute to their benefactor, the Vrene.

When the XSS Cousteau makes First Contact with the Rheas, a pre-space flight alien race, it creates an opportunity for humanity for an economic windfall for Earth. After 300 years of paying tribute to their benefactor, the Vrene, they can use the money. Humanity will make the Rheas a vassal race to humanity and pay tribute in exchange for protection from other advanced civilizations. Only the Chzek already have a claim on the Rheas, who they want to enslave to serve their empire. And, unknown to the humans, the Chzek are long-time enemies of the Vrene. With little choice, humanity and a Chzek vassal race are made proxies of their more advanced benefactors and fight Earth's first interstellar war. Questions arise as Commander Kree and others realize the Vrene were preparing Earth to fight this war with their enemy for hundreds of years. Did their "benefactor" set them up to fight a war they do not want and cannot afford? Or, did the Vrene do them a favor preparing them for a war they were already destined to fight as the Chzek expand their empire? Earth Interstellar is fast paced story of future interstellar conflict with credible representation of war in space.

It is the 22nd Century and mankind has achieved wormhole space travel; colonizing several nearby planets in the Milky Way galaxy. The United Star Systems now struggles to provide a unified system of government for Earth and its colonies amidst civil war, rampant piracy, and slaver raids. Meanwhile, Kaleb Taylor, an ordinary kid from a farming colony, is placed directly into the mayhem of the interstellar conflict against his will. With his home destroyed and no other options but to enlist in the United Star Systems military, he volunteers to undergo the most intense training available in order to become a Recon Marine. Soon thereafter, Kaleb and his elite platoon find themselves on the high-tech front lines of battle with a new, powerful, intergalactic enemy that threatens to destroy all of humanity. Earth and the colonial governments must now decide whether to set aside old grudges and unite under the United Star Systems banner to defend against this mysterious enemy, or face certain annihilation.

REVOLT ON A FRONTIER PLANET The corrupt Earth government is sending an army to Greenwood to remove the pioneers who discovered and settled the planet: the potential profits are too great to leave the world to scraggly ne'er-do-wells! Though the rugged individualists of Greenwood may be fractious and disinclined to agree on most things, the greedy politicians of Earth will learn a harsh lesson if they think the settlers won't join together to save their livelihoods and homes! Under Yerby Bannock, who never walked away from a drink or a fight, the Greenwood patriots will face thugs in the night, lawyers in a distant court, traitors in their own ranks¼ And, if they have to, a fortress built to shrug off the assault of a battlefleet! A millennium into the future, two advancements have altered the course of human history: the colonization of the Galaxy and the creation of the positronic brain. On the beautiful Outer World planet of Solaria, a handful of human colonists lead a hermit-like existence, their every need attended to by their faithful robot servants. To this strange and provocative planet comes Detective Elijah Baley, sent from the streets of New York with his positronic partner, the robot R. Daneel Olivaw, to solve an incredible murder that has rocked Solaria to its foundations. The victim had been so reclusive that he appeared to his associates only through holographic projection. Yet someone had gotten close enough to bludgeon him to death while robots looked on. Now Baley and Olivaw are faced with two clear impossibilities: Either the Solarian was killed by one of his robots--unthinkable under the laws of Robotics--or he was killed by the woman who loved him so much that she never came into his presence!

Are we alone? asks the writeup on the back cover of the dust jacket. The contributors to this collection raise questions that may have been overlooked by physical scientists about the ease of establishing meaningful communication with an extraterrestrial intelligence. By drawing on issues at the core of contemporary archaeology and anthropology, we can be much better prepared for contact with an extraterrestrial civilization, should that day ever come. This book develops a credible scenario for interstellar exploration and colonization. In so doing, it examines: • the present situation and prospects for interstellar exploration technologies; • where to go: the search for habitable planets; • the motivations for space travel and colonization; • the financial mechanisms required to fund such enterprises. The final section of the book analyzes the uncertainties surrounding the presented scenario. The purpose of building a scenario is not only to pinpoint future events but also to highlight the uncertainties that may propel the future in different directions. Interstellar travel and colonization requires a civilization in which human beings see themselves as inhabitants of a single planet and in which global governance of these processes is conducted on a cooperative basis. The key question is, then, whether our present civilization is ready for such an endeavor, reflecting the fact that the critical uncertainties are political and cultural in nature. It is written in such a way as to allow the non-professional reader to become part of the debate on the future of space programs.
