Property rights are theoretical socially-enforced constructs in economics for determining how a resource or economic good is used and owned. This idea of ownership must be constrained from the views of absolute ownership to a right to use the good within its expected scope of use. Ownership goes beyond the basic notions of property rights to this idea of viewing the ability to own as one of the most basic human rights. Resources can be owned by individuals, associations, collectives, or government

Abstract. The economic analysis of property has made progress in areas of property closest to contracts and torts, where the assumption that legal rules can be studied in isolation has some plausibility. Property law is a system, and economic analysis can be used to capture the role of traditional notions of things, possession, and ownership.
