Approaches to environmental education can be summarized as the development from education about the environment in the 1970s, through education in nature (1980s), and education for the environment (1990s) to a participatory focus in education for sustainability at the beginning of the millennium (Tilbury et al., 2005). Building on environmental education, education for ecological sustainability in ECE has been, and still is, worked with through all these aspects.

Now with new Introduction and additional new chapter. At a time when polls suggest that a majority of young British people believe that the future will offer a worse quality of life than the present, it is becoming imperative that children are introduced to principles of sustainability through the educational system from an early age, and that these principles are regularly reinforced and built upon. The government's own Panel on Sustainable Development has called for a 'comprehensive strategy for environmental and training', and NGOs frequently point to education as a key policy instrument in the transition to sustainable development. This is the first book published in Britain to provide an overview

of the theory and practice of these issues. It brings together contributions from environmental educators working in the formal and informal sectors and in continuing education, and provides perspectives on the philosophy, politics and pedagogy of education for sustainability, as well as case studies and pointers towards good practice. Part I establishes some initial perspectives on sustainability, education and the role of NGOs; the potential for education for sustainability in the formal and informal sectors is assessed in Parts II and III; Part IV discusses its development as part of the greening of business and local government; and Part V looks at the way forward.

This book suggests how the internationalisation of teaching and learning for sustainability can be a vehicle for a two-way flow of knowledge across national, cultural and theoretical boundaries.

Establishing links between the internationalisation of education and the ideal of global sustainability, the author presents innovative alternative solutions to address the pressing social, environmental and ethical problems of our age, a global priority demanding an educational response. By engaging with the Hindi concept of tri-vid, the three-in-one unification of knowledge, the author reassesses the very nature of knowledge through the intellectual agency of both students and educators. Once opportunities for alternatives not available in dominant

How do we equip learners with the values, knowledge, skills, and motivation to help achieve economic, social and ecological well-being? How can universities make a major contribution towards a more sustainable future? Amid rising expectations on HE from professional associations, funders, policy makers, and undergraduates, and increasing interest amongst academics and senior management, a growing number of higher education institutions are taking the lead in embracing sustainability. This response does not only include greening the campus but also transforming curricula and

teaching and learning. This book explains why this is necessary and – crucially – how to do it. Bringing together the experience of the HEFCE funded Centre for Sustainable Futures (CSF) at the University of Plymouth and the Higher Education Academy's Education for Sustainable Development Project, the book distills out the curriculum contributions of a wide range of disciplinary areas to sustainability. The first part of the book provides background on the current status of sustainability within higher education, including chapters discussing interdisciplinarity, international perspectives and pedagogy. The second part features 13 chapter case studies from teachers and lecturers in diverse disciplines, describing what has worked, how and why - and what hasn't. Whilst the book is organised by traditional disciplines, the authors and editors emphasise transferable lessons and interdisciplinarity so that readers

In a time of unprecedented transformation as society seeks to build a more sustainable future, education plays an increasingly central role in training key agents of change. This book asks how we can equip students and scholars with the capabilities to promote sustainability and how the higher education curriculum can be changed to facilitate the paradigm shift needed. Across the globe, a rising number of higher education institutions and academics are responding to these questions by transforming their own teaching and learning and their institutions' curricula. This book contributes to that development by examining in-depth case studies of innovative approaches and curriculum changes at multiple levels of the education sector. Elaborating key principles of higher education for sustainable development and
