Therefore, evaluation of patients with recurrent angioedema should be directed at excluding these different forms of angioedema before a diagnosis of idiopathic angioedema is made. The objective of this article is to provide an overview of the differential diagnosis of angioedema that reflects the angioedema guidelines that are currently in development.

Guidelines for the evaluation of common gastrointestinal symptoms have been developed by medical societies, medical centers, and managed care practices. 9[12 Few, if any, published documents have addressed modifications in the diagnostic evaluation on the basis of the needs of persons with disabilities such as impaired language. An evidence base is needed to guide evaluation and therapy, but until appropriate studies are conducted, guidelines must be based on expert opinion.

This document is organized on the basis of two related dimensions for the evaluation of guidelines. The first dimension is treatment efficacy, the systematic and scientific evaluation of whether a treatment works. The second dimension is clinical utility, the applicability, feasibility, and usefulness of the intervention in the local or specific setting where it is to be offered.
