Food safety has been a global concern for many years. While global sourcing of foods and ingredients provides great opportunity for variety and diversity of cultural products, there are significant risks. Programs that regulate food safety and quality in countries around the world vary in their scope and effectiveness, with many being underfunded. Rapidly developing countries may lack the expertise, laboratory resources for testing, and established inspection programs to adequately promote the safety of foods. Rather, these countries may be more focused on providing enough food for their citizens. Lack of documentation or traceability in the exporting country can further exacerbate the situation. Of course, safety problems in food imported from more developed countries also occur, and the source of food borne disease outbreaks are found regularly within the United States. Improving Import Food Safety gathers together vital information on the food safety programs of national governments, the food industry, and the testing industry. Chapters have been contributed by authors from the United States, Latin America, Europe, and Asia. Readers will learn about a variety of regulatory approaches to food safety at the federal and state levels in the United States, as well as in selected countries and within the food industry itself. They will also gain insights into the nature and source of safety problems, in addition to approaches to food safety

around the world. The book is divided into three sections: **Highlighting Key Issues:** authors illustrate the millions of permutations for the origin of ingredients, discussing the difficulty of policing imports, providing a unique perspective on the economic situation in China and insight into development of support for small farm producers in Mexico. **Legal and Regulatory Issues/Structures in the USA and Abroad:** describes the legal and regulatory system in the European Union, the United States, and China, plus a chapter addressing global approaches to fraud. **Potential Strategies to Improve Import Safety:** presents strategies to deal with what are ultimately global issues, but on multiple levels. Perspectives are provided by authors from Industry, and industry trade association, academia, and a recently semi-retired, global ambassador or food safety. Readers will find this book noteworthy because of the diverse topics and perspectives offered on the challenges of keeping food safe in a global economy. Authors come from a variety of backgrounds, and each has provided a unique perspective on this critical topic. The volume is aimed at importers and exporters of food and ingredients; food microbiologists, food safety and QC/QA personnel; regulatory and legal personnel in food manufacturing companies; food policy makers and regulatory officials and faculty and graduate students in food science.

The definitive resource on the innovative use of DISE for obstructive sleep apnea Obstructive sleep apnea is the most prevalent sleep-related breathing disorder, impacting an estimated 1.36 billion people worldwide. In the past, OSA was almost exclusively treated with Continuous Positive Airway Pressure (CPAP), however, dynamic assessment of

upper airway obstruction with Drug-Induced Sleep Endoscopy (DISE) has been instrumental in developing efficacious alternatives. *Drug-Induced Sleep Endoscopy: Diagnostic and Therapeutic Applications* by Nico de Vries, Ottavio Piccin, Olivier Vanderveken, and Claudio Vicini is the first textbook on DISE written by world-renowned sleep medicine pioneers. Twenty-four chapters feature contributions from an impressive group of multidisciplinary international experts. Foundational chapters encompass indications, contraindications, informed consent, organization and logistics, patient preparation, and drugs used in DISE. Subsequent chapters focus on treatment outcomes, the role of DISE in therapeutic decision making and upper airway stimulation, pediatric sleep endoscopy, craniofacial syndromes, advanced techniques, and more. **Key Highlights** Comprehensive video library highlights common and rare DISE findings A full spectrum of sleep disordered breathing and OSA topics, from historic to future perspectives Insightful clinical pearls on preventing errors and managing complications including concentric and epiglottis collapse Discussion of controversial DISE applications including oral appliances and positional and combination therapies This unique book is essential reading for otolaryngology residents, fellows, and surgeons. Clinicians in other specialties involved in sleep medicine will also benefit from this reference, including pulmonologists, neurologists, neurophysiologists, maxillofacial surgeons, and anesthesiologists.

This book provides an overview of issues associated primarily with food safety, shelf-life assessment and preservation of foods. Food safety and protection is a

multidisciplinary topic that focuses on the safety, quality, and security aspects of food. Food safety issues involve microbial risks in food products, foodborne infections, and intoxications and food allergenicity. Food protection deals with trends and risks associated with food packaging, advanced food packaging systems for enhancing product safety, the development and application of predictive models for food microbiology, food fraud prevention, and food laws and regulations with the aim to provide safe foods for consumers. Food Safety and Protection covers various aspects of food safety, security, and protection. It discusses the challenges involved in the prevention and control of foodborne illnesses due to microbial spoilage, contamination, and toxins. It starts with documentation on the microbiological and chemical hazards, including allergens, and extends to the advancements in food preservation and food packaging. The book covers new and safe food intervention techniques, predictive food microbiology, and modeling approaches. It reviews the legal framework, regulatory agencies, and laws and regulations for food protection. The book has five sections dealing with the topics of predictive microbiology for safe foods; food allergens, contaminants, and toxins; preservation of foods; food packaging; and food safety laws.

Believe it or Not . . . “ Ladies and Gentlemen and Boys and Girls ...welcome to the best entertainment money can buy, the Maxwell Brothers Circus! ” Four high school friends are able to do two things no one else on the planet can do . . . talk with dead people and time travel to that past. As they

slowly turn the dial of their Sprit Radio Kelly, Scott, Austin and Zoey hear hundreds of sad, lonely voices of souls that have passed but apparently never moved on, pleading for help. A young woman asks them to find her twin brother Jesse who had run away to the circus in 1927, then disappeared and was never heard from again. Going back and living with a circus sounds like fun. Plus an old book provides a glimpse into the past . . . as well as a photo of Jesse. They discover that circus life is not all glamour and fun; it's a lot of hard work. As usual, they jump in and quickly find jobs, places to sleep and new friends. But most importantly, they find Jesse. Now all they have to do is keep him alive. For Zoey, it's love at first sight. If they are successful and save his life, will she be able to let him go? Can she give up everything she has in the present for true love in the past?
