""Models in Geography"" aim at presenting the important models and theories in human geography at one place in a concise and cogent manner. These include System Analysis, Malthusian, Marxian and Demographic Transitional Models, Central Place Theory of Christaller and Losch, von Thunen Model of Agricultural Land Use, WeberÄ ' s Theory of Industrial Location, RostowÄ ' s Stages of Growth, Heartland and Rimland Theories, and Laws of International Boundaries and Frontiers. Besides, the Limits to Growth and Laws of Migration have also been examined. A full chapter has been devoted to types and patterns of rural settlements, primate city, rank-size rule and models of urban land. Documented with the latest data, maps and diagrams, one chapter has been written on climatic change.It is hoped that the book will be of immense help to the students and teachers alike. This will also be useful for those preparing for various competitive examinations."

The present book is an attempt to bring all theories of geography in one book for easy reading of teachers and students. Many divisions in geography has many theories. Readers should take effort to collect the theories from all books. All divisions has certain theories. There are so many theories in physical geography as well as human geography. A simple idea makes it convenient to read the theories in one book. First, we selected the certain theories as follows: Theory of continental drift, The theory of Isostasy, Von Thunens location theory, Crop combination method, The central place theory, Internal structure of city, The rank size rule, The social area analysis method, Losch's theory of economics of location, Walter Isard's theory, Alfred Weber's theory of least cost location, Demographic transition theory, Malthusian Theory of population- Criticism and applicability and Growth pole theory. Like this, there are 14 theories collected and compiled in this book as first volume. The theories collected from both physical geography and human geography. These theories are very important for those who are preparing for UPSC, should go through the theories.

The book charts out the history of Geographical Thought from early times to the present day in a single compact volume. Its main focus is on the modern period—beginning with Humboldt and Ritter—more specifically on conceptual developments since the Second World War. NEW TO THE SECOND EDITION The second edition is thoroughly revised and incorporates five new chapters dealing with: Nature, Method, Basic Ideas and Conceptual Structure of Geography The Problem of Dualities and How it was Resolved Nature and Role of Geography as a Social Science—Geographical vs. Sociological Imagination Time vis-à-vis Space—The Pattern-Process Perspective in Geographic Research New Directions in the Twenty-First Century Human Geography TARGET AUDIENCE • BA/B.Sc. (Hons.) Geography • BA/B.Sc. (General) Geography • MA/M.Sc. Geography • Aspirants of Civil Services

Economic and Social Geography reviews developments in the study of economic and social geography and brings together in a single volume work which is dispersed in many specialist textbooks. An attempt has been made to achieve a balance between oversimplification and over-elaboration, and to present essential concepts in a clear, concise manner. The book contains 25 chapters organized into five parts. Part One deals with the study of economic and social geography, including approaches to the study of human geography and environmental perception and behavior. Part Two on population geography covers topics such as population geography, population change, and population growth. Part Three on economic geography includes discussions of transportation, agriculture, and mineral resources. Part Four on settlement geography examines urbanization, the internal structure of towns and cities, and rural settlement. Part Five is devoted to urban and rural planning, problems of economic development, and resources. This book, together with its companion volume, Physical Geography Made Simple, should be of value to a variety of people. First, to those who are coming to academic geography for the first time, especially to those studying for GCE Advanced Level or ONC/OND examinations. It should also provide a concise introduction to first-year courses in further and higher education, including degree courses with a geography component, HNC/HND, and Certificate in Education courses.

Mobility is fundamental to economic and social activities such as commuting, manufacturing, or supplying energy. Each movement has an origin, a potential set of intermediate locations, a destination, and a nature which is linked with geographical attributes. Transport systems composed of infrastructures, modes and terminals are so embedded in the socio-economic life of individuals, institutions and corporations that they are often invisible to the consumer. This is paradoxical as the perceived invisibility of transportation is derived from its efficiency. Understanding how mobility is linked with geography is main purpose of this book. The third edition of The Geography of Transport Systems has been revised and updated to provide an overview of the spatial aspects of transportation. This text provides greater discussion of security, energy, green logistics, as well as new and updated case studies, a revised content structure, and new figures. Each chapter covers a specific conceptual dimension including networks, modes, terminals, freight transportation, urban transportation and environmental impacts. A final chapter contains core methodologies linked with transport geography such as accessibility, spatial interactions, graph theory and Geographic Information Systems for transportation (GIS-T). This book provides a comprehensive and accessible introduction to the field, with a broad overview of its concepts, methods, and areas of application. The accompanying website for this text contains a useful additional material, including digital maps, PowerPoint slides, databases, and links to further reading and websites. The website can be accessed at: http://people.hofstra.edu/geotrans This text is an essential resource for undergraduates studying transport geography, as well as those interest in economic and urban geography, transport planning and engineering.

"Human Geography, which now runs into the third edition, is a core textbook for geography students at the university level. It is mainly designed to introduce the discipline to the students in a social science perspective. The book covers the wide canvas of Human Geography covering the cultural, historical, political, regional, social, urban and economic aspects of it. The text has been written in a lucid, cogent and convincing style, documented with interesting maps and diagrams and illustrated with apt and appropriate examples from both developed as well as developing regions of the world. This edition contains a wealth of new material and latest data to ensure that it remains an unparalleled resource for the new generation of students and teachers."
