Most early electronic transmissions use the "-E" designator to differentiate them from their non-electronic cousins, but this has been dropped on transmissions with no mechanical version like the new GM 6L80 transmission. Today, GM uses a simple naming scheme for their transmissions, with the "Hydra-

~~List of GM transmissions~~ Wikipedia

GM used a lettered system of automobile platform codes for three decades. These letters were used as the fourth position of the VIN. Though today's GM platforms use Greek characters, they are still encoded with Latin characters in the fourth position. Position five encodes the specific model and trim level of the vehicle.

~~Automatic Transmission Identification and Information~~

If you can see it correctly, you will find an identification number of 7-8 letters and numbers. The 1st number is the year model of the transmission. For example, if the number is 0, the transmission is from 1990. But it's not that easy, because the transmission was made in the 1980s also.

for both high-performance and heavy-duty applications, with three different variations available: the M20, M21 and M22. Identification begins by visually identifying the units as Saginaw, Muncie or Borg Warner models and then by differentiating the three Muncie units visually and by decoding the serial number.
