A grayscale image is composed exclusively of shades of gray, varying from black at the weakest intensity to white at the brightest intensity. Grayscale coloring is basically taking a grayscale image and coloring it. Imagine coloring an old black and white photograph. That is grayscale coloring. You just color right over the shades of gray.

ImageOps module from PIL package from PIL import Image, ImageOps # creating an og_image object og_image = Image.open("./forest.jpg") og_image.show() # applying grayscale method gray_image = ImageOps.grayscale(og_image) gray_image.show() Output . You can save the grayscale image using the save() method.

~~How To Convert PIL Image to Grayscale in Python~~

In digital photography, computer-generated imagery, and colorimetry, a grayscale or image is one in which the value of each pixel is a single sample representing only an amount of light; that is, it carries only intensity information. Grayscale images, a kind of black-and-white or gray monochrome, are composed exclusively of shades of gray. The contrast ranges from black at the weakest intensity to white at the strongest. Grayscale images are distinct from one-bit bi-tonal black-and-white images

To convert an image to grayscale in any of the Microsoft Office
suite apps, right-click it and select Format Picture from the context
menu. This will open an image editing panel on the right. Go to the
Picture tab (the very last one). Expand the Picture Color options,
and click the little dropdown next to the Presets for Color
Saturation.
