This reference book is a complete guide to the trends and leading companies in the engineering, research, design, innovation and development business fields: those firms that are dominant in engineering-based design and development, as well leaders in technology-based research and development. We have included companies that are making significant investments in research and development via as many disciplines as possible, whether that research is being funded by internal investment, by fees received from clients or by fees collected from government agencies. In this carefully-researched volume, you'll get all of the data you need on the American Engineering & Research Industry, including: engineering market analysis, complete industry basics, trends, research trends, patents, intellectual property, funding, research and development data, growth companies, investments, emerging technologies, CAD, CAE, CAM, and more. The book also contains major statistical tables covering everything from total U.S. R&D expenditures to the total number of scientists working in various disciplines, to amount of U.S. government grants for research. In addition, you'll get expertly written profiles of nearly 400 top Engineering and Research firms - the largest, most successful corporations in all facets of Engineering and Research, all cross-indexed by location, size and type of business. These corporate profiles include contact names, addresses, Internet addresses, fax numbers, toll-free numbers, plus growth and hiring plans, finances, research, marketing, technology, acquisitions and much more. This book will put the entire Engineering and Research industry in your hands. Purchasers of either the book or PDF version can receive a free copy of the company profiles database on CD-ROM, enabling key word search and export of key information, addresses, phone numbers and executive names with titles for every company profiled.

This exciting new industry will enhance technologies of all types. Nanotechnology has applications within biotechnology, manufacturing, aerospace, information systems and many other fields. This book covers such nanotechnology business topics as micro-electro-mechanical systems (MEMS), microengineering, microsystems, microsensors, carbon tubes and much more. This is a young field with tremendous ground floor opportunities. Our terrific new reference tool includes a thorough market analysis as well as our highly respected trends analysis, all written from a business person's point of view. You'll find a complete overview, industry analysis and market research report in one superb, value-priced package. It contains thousands of contacts for business and industry leaders, industry associations, Internet sites and other resources. This book also includes statistical tables, an industry glossary and thorough indexes. The corporate profiles section of the book includes our proprietary, in-depth profiles of the 300 leading companies in all facets of the nanotechnology and microengineering industry. Purchasers of either the book or PDF version can receive a free copy of the company profiles database on CD-ROM, enabling key word search and export of key information, addresses, phone numbers and executive names with titles for every company profiled.

Japanese foreign direct investment has played a leading role in Asian economies for more than two decades. This book, describing the changing industrial dynamics after the Asian currency crisis in 1997, focuses on corporate strategies of Japanese automobile and electronics companies in Asian nations, with detailed analysis of management issues and strategies from the viewpoint of both the home economy and the recipient host economies. Among the cases presented are the global restructuring of the Korean automobile industry and the transfer of automotive technology to China via Taiwan. Other studies, from the electronics industry, look at production sites in Malaysia, backward integration in Singapore, and forward integration in Hong Kong. The contributions of specialists from Asia, Europe, and the United States collected here envision an ongoing process of globalization and provide valuable perspective and background for business management and East Asian studies.

China is the largest emerging market in the world, yet Western MNCs have invested significantly less there than their Asian MNC counterparts. Luo systematically compares Western and Asian investment strategies and their performance in the China market and finds lessons that Westerners must heed. He also reviews and analyzes new economic and regulatory environments (e.g., WTO) in China and their potential effect on all foreign investors. Clearly written and readable by anyone reasonably familiar with matters of world trade and investment, the book illustrates its points with case studies drawn from Luo's own research and is difficult to find elsewhere. The result is a needed contribution to the literature on international investment in the China market, primarily for upper level executives and scholars specializing in emerging markets and international business.
