Howto Delphi Create Document - amsterdam2018.pvda.nl
Word.Documents.Open('mydoc.doc'); end; Delphi will not check whether the last statement is correct. Instead, it will generate code to get a reference to the 'Documents' collection of the Word interface, and then it will use this reference to generate code that will call the Open method of this collection with 1 parameter, the ?lename.

Using MS Word in a Delphi application
fileData := TStringList.Create; // Create the TStringList object fileData.LoadFromFile('Test.txt'); // Load from Testing.txt file // Reverse the sequence of lines in the file lines := fileData.Count; for i := lines-1 downto (lines div 2) do begin saveLine := fileData[lines-i-1]; fileData[lines-i-1] := fileData[i];

Delphi Basics : Files
Description: The TTextFile type defines a file type for holding textual data. Text files provide a simple, convenient way of storing textual data. They do provide mechanisms for reading and writing numerical data stored as text (see Write), but it is safer and wiser to use structured records when storing anything other than plain text strings. However, text files do allow variable length records.

Delphi Basics : TextFile command
It allows you to create or load existing documents and edit them in the following manner: Delphi PDF Edit Library (programmatically modify text) Print text and draw on a document using it as a canvas: Add audio, video and text annotations; Change the size and resolution of specific pages or the whole file; Add, delete and copy pages;
