By the time I decided to start writing this book, I had worked in the HVAC & R industry for more than forty-five years. In this span of time, I had worked as a service technician in an NYC service company and as a trade instructor in several schools (see profile). I had written books and works; among them are RAC & E test-books, preparation for the EPAs certification, and the RMO's License for the NYC Fire Department, which had been used in the schools in which I worked. Regardless of the years that had passed, the refrigeration system used in Air Conditioning, systems as well as in Commercial Refrigeration, Domestic Refrigeration, etc., and in the equipment in general used today contains the same mechanical-electrical components as then.

HVAC troubleshooting guide to help facilities managers and maintenance personnel solve indoor environment and energy or water consumption problems. It is a step-by-step guide to identifying indoor environmental quality problems that may be caused by the operation of the HVAC system. It allows managers in charge of HVAC facilities, particularly those without a technical background, to initiate investigations, follow their progress and perhaps perform a few simple checks. Also supplies a series of 14 troubleshooting procedures for use by maintenance personnel actually performing the investigations. The IEQ problems covered by the procedures include: too hot, too cold, stuffy or still air, draughts, odours, noise from the HVAC system, dry eyes, throat or skin, lethargy, and headaches. The troubleshooting procedures can be purchased separately as a set of 14 sheets.

An overview of the servicing and troubleshooting of cooling equipment provides detailed explanations of the purpose of each cooling system component, covering the common problems encountered during troubleshooting. Includes troubleshooting charts, numerous diagrams, and suggested procedures for repairs.
