Journal Rankings on Psychology (miscellaneous)

The Journal Impact measures the average number of citations received in a particular year (2019) by papers published in the journal during the two preceding years (2017-2018). Note that 2019 Journal Impact are reported in 2020; they cannot be calculated until all of the 2019 publications have been processed by the indexing agency. In addition to the 2-year Journal Impact, the 3-year Journal Impact can provide further insights and factors into the impact of Annual Review of Psychology.

Annual Review of Psychology Journal Impact 2019-20 ...

APA Journals Portfolio Highlights. Following the release of the 2019 Journal Citation Reports® (JCR) from Clarivate Analytics, APA is pleased to report that 41% of our journals with an Impact Factor (24 titles) rank in the top 10 of their topic category. APA Journals highlights in Psychology categories.

Journal Impact Factors - APA Publishing | APA

The Impact Factor measures the average number of citations received in a particular year by papers published in the journal during the two preceding

years. Journal Citation Reports (Clarivate Analytics, 2020) 5-Year Impact Factor: 1.144 □. Five-Year Impact Factor: 2019: 1.144.

European Review of Applied Psychology - Journal - Elsevier

Here are the top 25 psychology journals and publications according to JCR Impact Factor: Annual Review of Psychology: This journal has been in publication since 1950, and is considered the premier psychology... Archives of General Psychiatry: Learn more about the latest developments in psychiatry. ...

Top 25 Psychology Journals and Publications

The International Journal of Psychology (IJP) advances psychological research of interest and relevance for the human condition around the world and serves as the outlet for internationally relevant basic and applied research in scientific psychology. Contributions are encouraged from all fields of psychology, especially those that address new developments and pursue innovative approaches.

International Journal of Psychology - Wiley Online Library

The impact factor of a journal is calculated by dividing the number of current year citations to the source items published in that journal during the previous two years. It is denoted as a ratio between citations and recent citable items published. You can either refer to the Journal Citation Reports (JCR) or the Scopus® database to find the impact factor of the journal.

Psychology journals list [Gilad Feldman Research WIKI]

Since its inception in 1986, the journal has published impactful scholarship in Industrial/Organizational Psychology, Organizational Behavior, Human Resources Management, Work Psychology, Occupational Psychology, and Vocational Psychology.

Journal of Business and Psychology | Home

The Journal Impact 2019-2020 of Journal of Environmental Psychology is 4.070, which is just updated in 2020. Compared with historical Journal Impact data, the Metric 2019 of Journal of Environmental Psychology grew by 7.11% . The Journal Impact Quartile of Journal of Environmental Psychology is Q1 . The Journal Impact of an academic journal is a scientometric Metric that reflects the yearly average number of citations that recent articles published in a given journal received.

Journal of Environmental Psychology Journal Impact 2019-20 ...

The impact factor is used to compare different journals within a certain field. The Web of Science indexes more than 11,500 science and social science journals. Journal impact factors are often used to evaluate the merit of individual articles and individual researchers. This use of impact factors was summarised by Hoeffel:

This volume shows mental health providers how to integrate cultural factors into cognitive behavior therapy (CBT). Contributing authors describe the application of CBT with clients of diverse cultures, and discusses how therapists can refine CBT to increase its effectiveness with clients from a variety of cultural backgrounds. They examine the unique characteristics of, and the use of CBT with various racial, ethnic, and religious minority groups in the United States including Latinx, Asian Americans, African Americans, American Indians, Alaska natives, Arabs, and Orthodox Jews. Strategies for using CBT with older adults, individuals with disabilities, and LGBTQ clients are also examined. A chapter on culturally responsive CBT clinical supervision closes this volume. This second edition includes fully-updated demographic information, a greater emphasis on culture-specific assessments, and a chapter on using CBT with clients of South Asian descent.

For decades, the field of gender, sex, and sexualities has been a focal point of increasing interest. This inquiry has been ignited by successive waves of dramatic social change, chief among them: the re-emergence of feminist movements in the U.S. and Europe in the late 1960s; the sustained (and increasingly successful) bids for legal, social, and religious acceptance of non-heterosexual sexualities in many parts of the world; and the burgeoning number of people (whether cisgendered, gender-variant, trans, or questioning) whose individual and collective experiences of gender and sexuality warrant deeper understanding and further progress toward a fuller realization of human potential and civil rights. In psychology, the intellectual project of understanding gender, sex, and sexualities encompasses a variety of subfields spanning neuroscience and developmental, cognitive, social, and cultural psychology, as well as critical theory. As such, these approaches have inspired new and different psychological questions, as well as increased interest in previously unfamiliar topics of investigation. Edited by Nancy K. Dess, Jeanne Marecek, and Leslie C. Bell, *Gender, Sex, and Sexualities* offers both students and scholars the tools they need to consider and approach such questions as: how do children come to embrace (or repudiate) gendered activities and identities; how do people experience intimacy, desire, and sexual arousal; and what strategies can psychologists use to de-center their own points of view and effectively contribute to a decolonial psychology? As a result, this volume will open new avenues of inquiry as well as cross-disciplinary conversations for readers everywhere.

The *Advances in Experimental Social Psychology* series is the premier outlet for reviews of mature, high-impact research programs in social psychology. Contributions to the series provide defining pieces of established research programs, reviewing and integrating thematically related findings by individual scholars or research groups. Topics discussed in Volume 61 include Worldview Conflict and Prejudice, Money and Happiness, Attitude Representation, Emotion Regulation, and Social Perception. Provides one of the most cited series in the field of experimental social psychology Contains contributions of major empirical and theoretical interest Represents the best and brightest in new research, theory, and practice in social psychology

Like fast food, fast science is quickly prepared, not particularly good, and it clogs up the system. Efforts to tackle our most pressing issues have been stymied by conflict within the scientific community and mixed messages symptomatic of a rushed approach. What is more, scientific research is being shaped by the bubbles and crashes associated with economic speculation and the market. A focus on conformism, competitiveness, opportunism and flexibility has made it extremely difficult to present cases of failure to the public, for fear that it will lose confidence in science altogether. In this bold new book, distinguished philosopher Isabelle Stengers shows that research is deeply intertwined with broader social interests, which means that science cannot race ahead in isolation but must learn instead to slow down. Stengers offers a path to an alternative science, arguing that researchers should stop seeing themselves as the 'thinking, rational brain of humanity' and refuse to allow their expertise to be used to shut down the concerns of the public, or to spread the belief that scientific progress is inevitable and will resolve all of society's problems. Rather, science must engage openly and honestly with an intelligent public and be clear about the kind of knowledge it is capable of producing. This timely and accessible book will be of great interest to students, scholars and policymakers in a wide range of fields, as well anyone concerned with the role of science and its future.

This book is an indispensable guide to how to write articles, choose journals, and deal with revisions or rejection. Each chapter is written by a highly experienced journal editor - people who have actually made decisions on manuscripts and publication, as well as being eminent in their respective scientific field and written many articles themselves. It showcases parts of articles, discusses journal submission, outlines the resubmission process,

and highlights systemic issues. Clear instructions are given on writing an empirical article, literature reviews, titles and abstracts, introductions, theories, hypotheses, methods and data analysis. Each part of the process is laid out from presenting results, to mapping-out a discussion and writing for referees. The integral skills of revising papers and ensuring a high impact are taught in 'article writing 101'. Whilst less intuitive knowledge is provided concerning publishing strategies, references, online submission, review systems, open access and ethical considerations.

Journal impact factors play an increasing role in academics as a tool for evaluating faculty, research, and resource allocations. These evaluations may be effective in departments where the subject matter is reasonably unified. However, given the diversity found within the subject matter of psychology, the impact factors of journals may not be comparable across the various areas. This study compares the average impact factors across decile levels of journals from seven areas of psychology. It is found that impact factor scores are not comparable across the seven areas of psychology. This difference is more pronounced when looking at higher decile journals. Further research could be conducted to investigate differences among psychology areas using other bibliographic variables, including some of the newer indices of individual scholar productivity, such as the h-index.

Systems Factorial Technology: A Theory Driven Methodology for the Identification of Perceptual and Cognitive Mechanisms explores the theoretical and methodological tools used to investigate fundamental questions central to basic psychological and perceptual processes. Such processes include detection, identification, classification, recognition, and decision-making. This book collects the tools that allow researchers to deal with the pervasive model mimicry problems which exist in standard experimental and theoretical paradigms and includes novel applications to not only basic psychological questions, but also clinical diagnosis and links to neuroscience. Researchers can use this book to begin using the methodology behind SFT and to get an overview of current uses and future directions. The collected developments and applications of SFT allow us to peer inside the human mind and provide strong constraints on psychological theory. Provides a thorough introduction to the diagnostic tools offered by SFT Includes a tutorial on applying the method to reaction time data from a variety of different situations Introduces novel advances for testing the significance of SFT results Incorporates new measures that allow for the relaxation of the high accuracy criterion Examines tools to expand the scope of SFT analyses Applies SFT to a spectrum of different cognitive domains across different sensory modalities

Covers quality of content, types of articles, manuscript structure, writing style, grammar, quotations, tables, footnotes, proofreading, and journal policies.

Decision Neuroscience addresses fundamental questions about how the brain makes perceptual, value-based, and more complex decisions in non-social and social contexts. This book presents compelling neuroimaging, electrophysiological, lesional, and neurocomputational models in combination with hormonal and genetic approaches, which have led to a clearer understanding of the neural mechanisms behind how the brain makes decisions. The five parts of the book address distinct but inter-related topics and are designed to serve both as classroom introductions to major subareas in decision neuroscience and as advanced syntheses of all that has been accomplished in the last decade. Part I is devoted to anatomical, neurophysiological, pharmacological, and optogenetics animal studies on reinforcement-guided decision making, such as the representation of instructions, expectations, and outcomes; the updating of action values; and the evaluation process guiding choices between prospective rewards. Part II covers the topic of the neural representations of motivation, perceptual decision making, and value-based decision making in humans, combining neurocomputational models and brain imaging studies. Part III focuses on the rapidly developing field of social decision neuroscience, integrating recent mechanistic understanding of social decisions in both non-human primates and humans. Part IV covers clinical aspects involving disorders of decision making that link together basic research areas including systems, cognitive, and clinical neuroscience; this part examines dysfunctions of decision making in neurological and psychiatric disorders, such as Parkinson's disease, schizophrenia, behavioral addictions, and focal brain lesions. Part V focuses on the roles of various hormones (cortisol, oxytocin, ghrelin/leptin) and genes that underlie inter-individual differences observed with stress, food choices, and social decision-making processes. The volume is essential reading for anyone interested in decision making neuroscience. With contributions that are forward-looking assessments of the current and future issues faced by researchers, *Decision Neuroscience* is essential reading for anyone interested in decision-making neuroscience. Provides comprehensive coverage of approaches to studying individual and social decision neuroscience, including primate neurophysiology, brain imaging in healthy humans and in various disorders, and genetic and hormonal influences on decision making Covers multiple levels of analysis, from molecular mechanisms to neural-systems dynamics and computational models of how we make choices Discusses clinical implications of process dysfunctions, including schizophrenia, Parkinson's disease, eating disorders, drug addiction, and pathological gambling Features chapters from top international researchers in the field and full-color presentation throughout with numerous illustrations to highlight key concepts
