A groundbreaking introduction to vectors, matrices, and least squares for engineering applications, offering a wealth of practical examples.

Who am I? This question has defied answer since time immemorial! World famous psychologists and

scientists have tried to find an answer to this question without success. In fact, you know me very well. You meet me daily, live with me, work with me, work for me, supervise me, make me work for you; and my mistakes cause disasters, in which you and I perish! You meet me as a father, mother, brother, sister, husband, wife, friend, lover, employer, employee... the list is endless. No venture or activity can ever be accomplished without me. You need me. You cannot get anything done without me. It is I with whom you want a relationship; who creates the greatest love story or heartbreak; makes any undertaking a success or a failure; is the single largest cost item in any company's balance sheet; and matters the most in any activity. Yet, I am least understood and cared! Your inability to understand me leads to most of the organizational and interpersonal problems, even accidents and disasters, in the world today. Disasters, in relationships - between families, friends, colleagues and lovers; in work-place interactions leading to organizational conflicts; in development or implementation of policies, procedures or processes I cannot be relied upon to follow, leading to accidents; these result from your inability to understand me. I cannot be managed or controlled. I can only be led, motivated, mentored and developed. Love me, or hate me, you cannot live without me! You got me and the sooner you understand me, the better will it be for both of us! I am a human, and this... is my story.

Unlock today's statistical controversies and irreproducible results by viewing statistics as probing and controlling errors.

The authors provide an introduction to quantum computing. Aimed at advanced undergraduate and beginning graduate students in these disciplines, this text is illustrated with diagrams and exercises.

Oehlert's text is suitable for either a service course for non-statistics graduate students or for statistics majors. Unlike most texts for the one-term grad/upper level course on experimental design, Oehlert's new book offers a superb balance of both analysis and design, presenting three practical themes to students: • when to use various designs • how to analyze the results • how to recognize various design options Also, unlike other older texts, the book is fully oriented toward the use of statistical software in analyzing experiments.
