Too often, people drift through life with a feeling of frustration, longing to find some adventure or purpose in life, envious of those whose lives seem exciting. In *WRITE IT DOWN, MAKE IT HAPPEN*, Henriette Anne Klauser shows you how to write your own lifescipt. Simply writing down your goals in life is the first step towards achieving them. The 'writing it down' part is not about time management; it is not a 'to-do today' list that will make you feel guilty if you don't get everything done. Rather, writing it down is about clearing your head, identifying what you want and setting your intent. You can 'make it happen' purely by believing in the possibility. In *WRITE IT DOWN, MAKE IT HAPPEN*, there are stories from ordinary people who witnessed miracles large and small unfold in their lives after they performed the basic act of putting their goals on paper.

This revised and retitled edition of *Searching Writing* includes two additional I-Search papers, one by a teacher, and a new chapter entitled "The Larger Context," which shows how the I Search concept can work throughout the whole curriculum in school and college. As with the first edition, *The I-Search Paper* is more than just a textbook; it's a new form of instructional help -- a context book -- that shows students what authority is in matters of learning and invites them to join the author and teacher in the educational movement called "Writing to Learn." To put this book in the hands of all the students in the course is not only to help them carry out an I-Search but to introduce them in a delightful way to the resources and tools of intellectual inquiry -- but one that never forgets the emotional or physical side of human activity. This is a rare textbook that treats students as partners in learning. It shows what it is to take charge of one's own learning and suggests that this move is one that productive people keep making throughout their lives.

Humans, especially children, are naturally curious. Yet, people often balk at the thought of learning science--the "eyes glazed over" syndrome. Teachers may find teaching science a major challenge in an era when science ranges from the hardly imaginable quark to the distant, blazing quasar. *Inquiry and the National Science Education Standards* is the book that educators have been waiting for--a practical guide to teaching inquiry and teaching through inquiry, as recommended by the National Science Education Standards. This will be an important resource for educators who must help school boards, parents, and teachers understand "why we can't teach the way we used to." "Inquiry" refers to the diverse ways in which scientists study the natural world and in which students grasp science knowledge and the methods by which that knowledge is produced. This book explains and illustrates how inquiry helps students learn science content, master how to do science, and understand the nature of science. This book explores the dimensions of teaching and learning science as inquiry for K-12 students across a range of science topics. Detailed examples help clarify when teachers should use the inquiry-based

approach and how much structure, guidance, and coaching they should provide. Turning to assessment, the committee discusses why assessment is important, looks at existing schemes and formats, and addresses how to involve students in assessing their own learning achievements. In addition, this book discusses administrative assistance, communication with parents, appropriate teacher evaluation, and other avenues to promoting and supporting this new teaching paradigm.
