IPSec VPN is a popular set of protocols used to ensure secure and private communications over Internet Protocol (IP) networks, which is achieved by the authentication and encryption of IP packets between two end-points.

What is IPsec VPN - SSL Vs IPsec VPN (November 2020)

Both SSL/TLS and IPsec VPNs support a range of user authentication methods. IPsec employs Internet Key Exchange (IKE) version 1 or version 2, using digital certificates or preshared secrets for two-way authentication. Preshared secrets is the single most secure way to handle secure communications but is also the most management-intensive.

Choosing between an SSL/TLS VPN vs. IPsec VPN

IPSec acts at the network layer, protecting and authenticating IP packets between a PIX Firewall and other participating IPsec devices (peers), such as other PIX Firewalls, Cisco routers, the Cisco Secure VPN Client, the VPN 3000 Concentrator series, and other IPsec-compliant products. IPsec enables the following Cisco IOS VPN features:

Internet Protocol Security (IPsec) > VPNs and VPN ...

To secure VPN communication while passing through the WAN, the two participants create an IP Security (IPsec) tunnel. The term tunnel does not denote tunnel mode (see Packet Processing in Tunnel Mode). Instead, it refers to the IPsec connection.

In computing, Internet Protocol Security is a secure network protocol suite that authenticates and encrypts the packets of data to provide secure encrypted communication between two computers over an Internet Protocol network. It is used in virtual private networks. IPsec includes protocols for establishing mutual authentication between agents at the beginning of a session and negotiation of cryptographic keys to use during the session. IPsec can protect data flows between a pair of hosts, betwe

IPsec - Wikipedia

Introduced in the 1990s, IPsec is a traditional protocol for VPNs to talk to each other. It can be used for remote access, or for inter-VPN communications. It is an alternative to SSL/TLS VPNs, which offer entirely browser-based access without using a dedicated software application on the client side.
