JIS (Japanese Industrial Standard) Machine Screws ...

The JIS (Japanese Industrial Standard) screw is commonly found on Japanese motorcycles and equipment. Also called cross point screws. It looks like a Phillips screw, but is designed not to cam out and will therefore be damaged by a Phillips screwdriver if it is too tight. Heads are usually identified by a single dot or an “X” to one side of the cross slot.

Home - JIS Screwdrivers

However, the key difference is that the “JIS” (Japanese Industrial Standard) design allowed torque and over-tightening to be controlled by the operator — not at the head of the screw. Without magnification, it’s very hard to distinguish a Phillips ® versus a JIS screw. Some JIS screws can be identified by a single dot or dimple on the head of the screw.

What is Japanese Industry Standard (JIS)

Screw Thread - 3 Metric screw thread JIS B0205 (coarse) JIS B0207 (fine) H=0.866025P H1=0.541266P d2=d - 0.649519P d1=d - 1.082532P D=d D1=d1 D2=d2 P=Pitch D=For internal thread Angle of thread is 60°. The Crest is flat, and there is clearance at the root. External thread and internal thread engage well. Larger root radius and lower thread height enable easy

JIS (Japanese Industrial Standard) Screw Thread

The screwdrivers feature the JIS (Japanese Industrial Standard) head pattern which is designed to not cam out due to the longer head pattern and is specially designed for use with Japanese products such as Honda, Suzuki, Toyota and many more. Many bicycle parts from manufacturers such as Shimano also use JIS headed screws.

Amazon.co.uk: jis screwdriver

JIS screws: Myth or Miracle? That is often the question when it comes to discussing JIS or Japanese Industrial Standard screwdrivers. I've been told there is no difference between a standard Phillips (or “cross-head”) screwdriver and a JIS screwdriver, as long as the sizes are equal. I wasn't so sure.

JIS Screwdrivers - webBikeWorld

Most people don't know that there are multiple screw types that look like the traditional Phillips. The most popular of which is the JIS (Japanese industrial standard), to which the JIS screwdriver is made to the JIS B 4633 specification. The other is a pozidrive, but those are more commonly understood to be different.

JIS vs Phillips screwdrivers and Where to buy a JIS ...

JIS screws are common in Japanese motorcycles, cars and machinery, as well as some European made motorcycles Japanese Industrial Standard (J.I.S.) cross-point screwdriver’s fits a JIS and a Phillips screws. However, a Phillips driver will not properly fit a J.I.S. screw. It can only fit a Phillips screw snugly
