This comprehensive clinical handbook for nurses in pediatric hematology/oncology, authored by nurse experts from the United Kingdom and North America, contains in-depth information regarding pathophysiology, diagnosis, treatment, advanced assessment, and interventions. The book is divided into 5 sections: pediatric cancers, hematologic disorders, treatment of childhood cancer, side effects of treatment and disease, and supportive and palliative care. It is organized in a user-friendly format with quick reference guides for the nurse. With the ongoing, challenging developments faced during the clinical nursing care of children with cancer, this handbook will provide an indispensable tool for those working in this speciality.

Originally emanating from presentations at an international conference, this text brings together research and practice development from three perspectives: practice, management and education. Within these three sections the book presents a series of chapters written mainly by practitioners, but some in collaboration with academics. At the end of each section there is a commentary by a practitioner, manager or researcher, which aims to offer a helpful critique on the papers in their section, guiding the reader to consider other areas of research and practice development. At a time when practitioners are being called to produce and use evidence in their practice, this book should offer a valuable contribution to that evidence base.
