Leah Trachtman-Palchan was an ordinary woman who lived an extraordinary life. This was a life of migration, dissent, exile and survival. Born in the final years of Tsarist Russia, her family was forced to leave their small town following the repeated pogroms of the Civil War era. A two year voyage followed, bringing them all to British Mandate Palestine in 1921. Here what seems like a typical Jewish story of migration from Eastern Europe in the early twentieth century took an unexpected turn. As a teenager, Leah joined the Communist movement in Palestine - illegal under the British Mandate. She was arrested, imprisoned and eventually deported by the British to the Soviet Union. This memoir is filled with colourful, and sometimes harrowing, sketches of the people

who passed through her life during the era of Stalin's Great Purges and the evacuation of factories to Siberia during World War II. Shedding new light on both Mandate Palestine and the Jewish experience in Soviet Moscow, this book reveals the remarkable story of a woman living through some of the most pivotal events of twentieth-century history.

This book consists of five sections. The first section details methods for analyzing both presynaptic and postsynaptic function and emphasizes the molecular aspects of synapses. It describes ongoing studies of neurotransmitter release, voltage-sensitive ion channels, and electronic transmission at gap junctions. The second section focuses on the growing menagerie of neurotransmitters: their categorization into chemical families, their relation to ion channels, their modulation by second messenger systems and their role in pharmacologic action. The third section considers the important relationship of transmitter diversity and synaptic types to the behavior of actual cellular networks. All of the studies described in these sections point to the necessity of considering interactions between anatomy, chemistry, physiology and pharmacology if

This book provides a fundamental understanding of immunopathology and immunopathologic processes, with particular attention to nonclinical toxicology studies. Chapters provide organ system–based summaries of spontaneous pathology and common responses to xenobiotics. A companion volume, *Immunopathology in Toxicology and Drug Development: Volume 1, Immunobiology, Investigative Techniques, and Special Studies*, offers an overview of general immunobiology, cells of the immune system, signaling and effector molecules, and immunopathology assays. These informative and strategic books were created in response to the large segment of drug development that focuses on chronic diseases, many of which involve alterations to the immune system. Therapies that target these diseases commonly involve some form of immunomodulation. As a result, the two volumes of
