Vibration Modal Analysis of Landing Gear Based on ANSYS Materials selection for the Landing Gear is made using Ansys.. In general the landing gear is made of metal substrate which is a Titanium alloy Ti-6 Al - 4V. The SAE 1035 steel and 7075-76 aluminium alloy is replaced to improve the structural behaviour of the Landing Gear assembly. [14]

Landing Gear Ansys Analysis - mallaneka.com

In the present work, a landing gear is analysed for structural safety for the given design loads and compared to different materials. Initially the landing gear is modelled using Catia software for the given dimensions and later meshed using Hypermesh for good quality elements which will give better results.
