~~—Part 4: Hardy Beginner Corals and where to Place Them~~ What Are Coral Reefs And What's Their Purpose? **Life In A Coral Reef**

Life on the Coral Reef. The world of the coral reef is one of the most diverse ecosystems on our planet. The sheer number of life forms on the reef rivals even that of the tropical rain forests. Built over thousands of years by tiny calcium-producing organisms, the reefs are a haven for countless thousands of life forms, some of which seem totally alien in form.

Part of the second stage of the Let's-Read-and-Find-Out Science series, intended to familiarize primary-school students with basic scientific concepts, Life In a Coral Reef provides a brief picture-book introduction to these important underwater ecosystems. From their formation from coral polyps, to the wealth of species that live in or near them, the simple text covers a lot of ground, while the informative afterword includes further details.

Coral reefs provide an important ecosystem for marine life, offering food and shelter among their crevices and branches for animals including fishes, molluscs, sea urchins and sponges. Corals are found in all of Earth's oceans, from tropical to freezing temperatures, however they only build coral reefs in warm, shallow seas in the tropics.

The world of a coral reef community is one of color, bizarre-looking life forms and intrigue. The moment you place your face in the water and gaze downward in a typical coral reef setting, it is all but impossible not to feel an almost overwhelming sense of wonderment. Everywhere you look, brilliantly colored fishes catch your eye. Some appear to cruise lazily, while others dart about in a hurried fashion.
