Designed to help all students to learn chemistry, Living by Chemistry is a full-year high school curriculum that incorporates science practices with a guided-inquiry approach. Students of all levels will gain a deep understanding of chemistry with this program. With Living by Chemistry, students learn chemistry in the same way that chemists work by asking questions, collecting evidence, and thinking like scientists. Living by Chemistry is the product of a decade of research and development in high school classrooms, focusing on optimizing student understanding of chemical principles. Author Angelica Stacy assisted in the development of the NGSS standards and served on the AP Chemistry redesign committee. She designed Living by Chemistry as an introduction for students who will take AP Chemistry or additional college classes. The curriculum was developed with the belief that science is best learned through first-hand experience and discussion with peers. Guided inquiry allows students to actively participate in, and become adept at, scientific processes and communication. Living Chemistry is a 23-chapter textbook that provides a thorough, systematic coverage of the chemical information related to health. The opening chapters cover the basic concepts required for understanding the "language" and principles of chemistry. These chapters also introduce the International System of units followed by the studies of carbon compounds based on functional groups. The discussions then shift to the study of biologically important molecules, such as the chemistry of carbohydrates, lipids, and proteins, as well as the individual reaction steps for important complex metabolic pathways. The remaining chapters explore the chemistry of vitamins, hormones, body fluids, drugs and poisons. Optional topics, including a mathematics review, scientific notation, the unit-factor and proportion methods, metric conversion with practice problems, atomic orbitals, hybridization, metabolic pathways, and the cell, are provided in the supplementary texts. This book is of great value to undergraduate chemistry students.

0970s, it was the first text of its kind to challenge the long-standing assumption that a study of biology must be predicated upon the atheistic philosophy of Darwinian evolution. Now, over three decades later, as the so-called theory of evolution faces a deepening crisis, Christian Liberty Press is pleased to present a newly updated and improved version of the textbook that first challenged the modern scientific community with the validity of biblical creationism. *Biology: A Search for Order in Complexity, Second Edition*, is the culmination of over two years of diligent study and labor by a team of educators and scientists who are committed to giving students a greater understanding of and appreciation for the handiwork of Almighty God. Every effort has been made to ensure that this biology text is scientifically accurate and relevant to the needs of students in the twenty-first century. With gratefulness to the Creator of the whole earth, we humbly present this new edition to the public in the hope that it will be a powerful influence in the lives of those who are seeking true science and an understanding of life.
