gasis purely two-dimensional in the sense that only the ( $p = 1$ ) band needs to be considered, and  $\mathbf{k}$  is a two-dimensional vector with the length  $k = \sqrt{k_x^2 + k_y^2}$ . The most important quantity is the Fermi energy, which is determined by evaluating  $N$  at zero temperature:

$$n = \frac{N}{A} = \frac{k_F^2}{2\pi} \frac{D}{L}$$
