bookdown: Authoring Books and Technical Documents with R Markdown presents a much easier way to write books and technical publications than traditional tools such as LaTeX and Word. The bookdown package inherits the simplicity of syntax and flexibility for data analysis from R Markdown, and extends R Markdown for technical writing, so that you can make better use of document elements such as figures, tables, equations, theorems, citations, and references. Similar to LaTeX, you can number and cross-reference these elements with bookdown. Your document can even include live examples so readers can interact with them while reading the book. The book can be rendered to multiple output formats, including LaTeX/PDF,

HTML, EPUB, and Word, thus making it easy to put your documents online. The style and theme of these output formats can be customized. We used books and R primarily for examples in this book, but bookdown is not only for books or R. Most features introduced in this book also apply to other types of publications: journal papers, reports, dissertations, course handouts, study notes, and even novels. You do not have to use R, either. Other choices of computing languages include Python, C, C++, SQL, Bash, Stan, JavaScript, and so on, although R is best supported. You can also leave out computing, for example, to write a fiction. This book itself is an example of publishing with bookdown and R Markdown, and its source is fully available on GitHub.

Astronomy is a scienti?c discipline that

has developed a rapid and impressive growth in Spain. Thirty years ago, Spain occupied a purely anecdotal presence in the international context, but today it occupies the eighth position in the world in publication of astronomical articles, and, among other successes, owns and operates ninety per cent of the world's largest optical telescope GTC (Gran Telescopio Canarias). The Eighth Scientific Meeting of the Spanish Astronomical Society (Sociedad Española de Astronomía, SEA), held in Santander in July 7-11 2008, whose proceedings are in your hands, clearly shows the enthusiasm, motivation and quality of the present Spanish astronomical community. The event brought together 322 participants, who represent almost 50% of Spanish professional astronomers. This percentage, together with the continuously increasing, with respect to previous SEA meetings,

number of oral presentations and poster contributions (179 and 127 respectively), confirms that the SEA conferences have become a point of reference to assess the interests and achievements of astrophysical research in Spain. The most important and current topics of modern Astrophysics were taken into account at the preliminary meeting, as well as the number and quality of participants and their contributions, to select the invited speakers and oral contributors. We took a week to enjoy the high quality contributions submitted by Spanish astronomers to the Scientific Organizing Committee. The selection was difficult. We wish to acknowledge the gentle advice and commitment of the SOC members.

This book is the first comprehensive monograph on the Function Theory of Lexicography, which originated at the

Aarhus School of Business (Aarhus University). Function Theory considers dictionaries to be tools that are constructed for assisting specific users with punctual needs in specific usage situations, e.g. communicative-oriented situations and cognitive-oriented situations. The book's main focus is on defending the independent academic status of lexicography and its corollary: The process of designing, compiling and updating (specialised) online dictionaries needs a theoretical framework that addresses general and specific aspects. The former are common to all types of information tools, the latter are mainly dependent on the media for which the information tool is constructed and their specific target users. This book offers both aspects and moves from the highest level of abstraction to very detailed aspects of lexicographic work, e.g. how to convert an originally-

conceived polyfunctional online dictionary into several monofunctional usage-based ones. The book illustrates that the theory and the methodology currently used by advocates of the Function Theory of Lexicography offers better results than other approaches and therefore makes its case for proposing the Function Theory for terminological/terminographical work.

The first edition of *Anthropology and Climate Change* (2009) pioneered the study of climate change through the lens of anthropology, covering the relation between human cultures and the environment from prehistoric times to the present. This second, heavily revised edition brings the material on this rapidly changing field completely up to date, with major scholars from around the world mapping out trajectories of research and issuing specific calls for action. The new

edition introduces new foundational chapters laying out what anthropologists know about climate change today, new theoretical and practical perspectives, insights gleaned from sociology, and international efforts to study and curb climate change making the volume a perfect introductory textbook; presents a series of case studies both new case studies and old ones updated and viewed with fresh eyes with the specific purpose of assessing climate trends; provides a close look at how climate change is affecting livelihoods, especially in the context of economic globalization and the migration of youth from rural to urban areas; expands coverage to England, the Amazon, the Marshall Islands, Tanzania, and Ethiopia; re-examines the conclusions and recommendations of the first volume, refining our knowledge of what we do and do not know about climate change and

Final publication of excavations started by Alan Wace between 1950 and 1955 and finished by Nicolas Verdis between 1957 and 1963. The houses, lying outside the citadel walls to the south-west of the Tomb of Clytemnestra, contained 22,000 ivories as well as the first Linear B tablets found at Mycenae. Finds of all categories, the excavation and architecture are all published here. The function of the houses and their role in the 13th century BC bureaucracy is assessed. The microfiche contain detailed catalogues of all the material and scientific analyses of the stirrup jars.

HCV during the past decade. The first section reviews the natural history of chronic HCV, how this virus can affect other organs in addition to the liver, and whether treating chronic HCV alters the natural history of this disease. Section 2 reviews the advances that have been made in the treatment of chronic HCV during the past decade with interferon based therapy. Separate chapters on response guided therapy and how to manage the adverse events associated with these medications provide the physician with the concepts required to more effectively treat chronic HCV now and in the future. As the genetics of virologic response have recently been elucidated, a chapter is devoted to helping the clinician understand how genes that modulate disease processes and their treatment are identified and utilized in clinical care. Section 3 deals with the future of HCV

treatment and specific inhibitors of HCV. Specific chapters explain how targets for drugs are identified and how drugs are then developed and tested; how mutations of HCV develop and how anti-viral agents will affect this process; the most up to date data regarding the treatment of chronic HCV with peginterferon, ribavirin and anti-viral agents; and the potential to treat chronic HCV with just oral anti-viral agents and without peginterferon and ribavirin in the future. The final section of this book covers issues related to liver transplantation in patients with chronic HCV. Separate chapters review the natural history of chronic HCV in liver transplant recipients and the impact of utilizing HCV positive donors. The volume concludes with chapters that cover the treatment of chronic HCV both prior to and after liver transplantation with potent anti-viral agents. Chronic Hepatitis C Virus:

Among the buildings on the National Mall in Washington, D.C., only the Pan American Union (PAU) houses an international organization. The first of many anticipated "peace palaces" constructed in the early twentieth century, the PAU began with a mission of cultural diplomacy, and after World War II its Visual Arts Section became a leader in the burgeoning hemispheric arts scene, proclaiming Latin America's entrée into the international community as it forged connections between a growing base of middle-class art consumers on one hand

and concepts of supranational citizenship and political and economic liberalism on the other. *Making Art Panamerican* situates the ambitious visual arts programs of the PAU within the broader context of hemispheric cultural relations during the cold war. Focusing on the institutional interactions among aesthetic movements, cultural policy, and viewing publics, Claire F. Fox contends that in the postwar years, the PAU Visual Arts Section emerged as a major transfer point of hemispheric American modernist movements and played an important role in the consolidation of Latin American art as a continental object of study. As it traces the careers of individual cultural policymakers and artists who intersected with the PAU in the two postwar decades—such as Concha Romero James, Charles Seeger, José Gómez Sicre, José Luis Cuevas, and Rafael Squirru—the book

also charts the trajectories and displacements of sectors of the U.S. and Latin American intellectual left during a tumultuous interval that spans the Mexican Revolution, the Spanish Civil War, the New Deal, and the early cold war. Challenging the U.S. bias of conventional narratives about Panamericanism and the postwar shift in critical values from realism to abstraction, *Making Art Panamerican* illuminates the institutional dynamics that helped shape aesthetic movements in the critical decades following World War II.
