c. Optimal solution is $x_1 = 0, x_2 = 4, y = 5 \ln 4$. Any positive value for x_1 reduces y . d. If $k = 20$, optimal solution is $x_1 = 15, x_2 = 5$. Because x_2 provides a diminishing marginal increment to y whereas x_1 does not, all optimal solutions require that, once x_2 reaches 5, any extra amounts be devoted entirely to x_1 .

An Introduction to Mathematical Analysis for Economic Theory and Econometrics takes a unified approach to understanding basic and advanced spaces through the application of the Metric Completion Theorem. This is the concept by which, for example, the real numbers complete the rational numbers and measure spaces complete fields of measurable sets. Another of the book's unique features is its concentration on the mathematical foundations of econometrics. To illustrate difficult concepts, the authors use simple examples drawn from economic theory and econometrics. Accessible and rigorous, the book is self-contained, providing proofs of theorems and assuming only an undergraduate background in calculus and linear algebra. Begins with mathematical analysis and economic examples accessible to advanced undergraduates in order to build intuition for more complex analysis used by graduate students and researchers Takes a unified approach to understanding basic and advanced spaces of numbers through application of the Metric Completion Theorem Focuses on examples from econometrics to explain topics in measure theory
