rapidly expanding field of Lewis base catalysis that has attracted enormous attention in recent years. Lewis base catalysis is a conceptually novel paradigm that encompasses an extremely wide variety of preparatively useful transformations and

Get Free

Modern

is particularly effective for enantioselectively constructing new stereogenic centers.

As electron-pair donors, Lewis bases can influence the rate and stereochemical course of myriad synthetic organic reactions. The book presents the conceptual/mechanistic

Get Free

Modern

principles that underlie Lewis base catalysis, and then builds upon that foundation with a thorough presentation of many different reaction types. And last but not least, the editors, Prof. Edwin Vedejs and Prof. Scott E. Denmark, are without doubt the leaders in

Get Free

Modern

this emerging field
and have compiled
high quality
contributions from an
impressive collection
of international
experts.

The book has four
main parts. In the first
part the discussion
centers on inorganic
synthesis reactions,
dealing with

Get Free

Modern

inorganic synthesis

and preparative

chemistry under

specific conditions:

high temperature,

low temperature and

cryogenic,

hydrothermal and

solvothermal, high

pressure and super-

high pressure,

photochemical,

microwave

irradiation and

Get Free

plasma conditions.

The second part
systematically

describes the

synthesis,

preparation and

assembly of six

important categories

of compounds with

wide coverage of

distinct synthetic

chemistry systems:

coordination

compounds,

Get Free

Modern

Coordination

polymers, clusters,
organometallic

compounds, non-

stoichiometric

compounds and

inorganic polymers.

In the third part

seven important

representative

inorganic materials

are selected for

discussion of their

preparation and

Get Free

Modern

Chemistry, including
porous, advanced
ceramic, amorphous-
and nano-materials,
inorganic

membranes,
synthetic crystals and
advanced functional
materials. The last
part of the book,
which is also its
distinct feature,
addresses the
frontiers of inorganic
