future. Concentrating on the later sixteenth- and seventeenth-century history of Vijayanagara, this book details the pattern of rule established in this important and long-lived Hindu kingdom that was followed by other, often smaller kingdoms of peninsular India until the onset of colonialism. Through an analysis of the politics, society,

and economy of Vijayanagara, the author addresses the central question of the extent to which Vijayanagara, as a medieval Hindu kingdom, can be viewed as a prototype of the polities and societies confronted by the British in the late eighteenth century. The book thus presents an understanding and appreciation of one of the great medieval

Vacuum Tubes is the first in a multi-volume series on historical computing machines. This series will span the development of computer systems from the Zuse machines of the early 1930s to about 1995 when microprocessors began to be commoditized. Each volume will focus on a range of technologies, or a class of machines or a

namely input, computing engine, and output. Early machines from Atanasoff and Berry, Aiken, Stibitz, and IBM are described. The transition from relays to vacuum tubes increased speed and performance significantly, and led to the first true computers in ENIAC, EDSAC, and EDVAC which used paper tape and

Williams tubes for I/O and storage. These machines were built by universities. Several early machines were purpose built such as Colossus and BINAC, and created with government support and industrial know-how. By the mid-to-late '50s, computing machines were being built by universities (the SSEM, Whirlwind, and IAS machines),

governments (the NBS SEAC and SWAC, and several other machines), and industry (the UNIVAC series and the English Electric DEUCE). Most of these machines were constructed using the von Neumann architecture, and represent an evolution of thinking in how computing machines were to operate along with some innovative ideas

in software and programming languages. By the end of the 1950s, the design, development, programming and use of computing machines were in full ferment as many new ideas were proposed, many different machines were designed and some were constructed. Computing machines became a commercial enterprise.

Governments receded from building machines to levying requirements and funding construction, while universities continued to explore new architectures, new operating systems, and new programming languages.

Focusing on the Deccan Sultanates of 16th-

and 17th-century central India, Local States in an Imperial World promotes the idea that some polities of the time were not aspiring to be empires. Instead of the universalist and hierarchical vision typical of the language of empire, the sultanates presented another brand of state - one that prefers negotiation, flexibility and plurality of languages,

religions and cultures. Building on theories of early modernity, empire, cosmopolitanism and vernaculars, Roy Fischel considers the components that shaped state and society: people, identities and idioms. He presents a frame for understanding the Deccan Sultanates as a rare case of the early modern non-imperial
