'The concept of the "entrepreneurial economy" stems from the widespread belief that entrepreneurship is perhaps the most important and scarcest input factor of modern highly developed economies. This has resulted in a multitude of studies on the drivers and consequences of entrepreneurship in its many manifestations. Less is known about how entrepreneurship interlinks with modern institutions and policy aims such as education, finance, regulation, and the struggle with crises. The present volume fills this gap in our understanding of the "entrepreneurial economy". It shows that the concept of the "entrepreneurial economy" is so broad that "entrepreneurial society" is the better term.' – Roy Thurik, Erasmus University Rotterdam, The Netherlands In the constant challenge economies face to grow and adapt, entrepreneurship and innovation are considered key factors. This impressive book shows the complementary and decisive role that education, access to an efficient financial system, and regulation may have in creating an entrepreneurial society. Not only growth, but also better growth is required to address the tremendous challenges that our European economies are facing. The contributors illustrate how more entrepreneurs and more new innovative entrepreneurial firms can contribute. They highlight a variety of factors that may be considered to promote entrepreneurship among young people, and innovative activities among firms. These include education and seeking the most favourable context for the creation and development of sustainable, innovative companies, especially during economic crises. This timely book analyses the built economy in education, sustainability and

regulation to favour the emergence of new, entrepreneurial firms. With an international focus, the book provides the results of numerous research projects around entrepreneurship. Based on solid quantitative analysis, it will prove essential for students and researchers who are building quantitative models to study different aspects of the entrepreneurial society.

Entrepreneurship is the engine of economic development, which in turn impacts upon the challenges facing future entrepreneurs. This timely book explores institutional, behavioural and policy issues of primary importance to understanding the entrepreneurial society. Topics covered include entrepreneurship in relation to formal and informal institutions; entrepreneurial choice, orientation and success; entrepreneurial behaviours; entrepreneurial finance, growth and economic crises; and entrepreneurship, social dimensions and outcomes.

The economic model of behaviour is fundamental not only in economic theory, but also in modern approaches of other social sciences, above all in political science and law. This book provides a comprehensive treatise of the general model, its philosophical and methodological foundations and its applications in different fields. In addition to the basic model, extensions to its assumptions are examined to account for complex applications like low-cost situations with moral behaviour.

Marketing theory is often developed in isolation not collaboration; theoretical perspectives sometimes are ignorant of the diversity of marketing practice. In “ The roots and uses of marketing knowledge: a critical inquiry into the theory and practice of marketing ” , the author engages with the vital conversation about how marketing knowledge is created, disseminated and consumed, looking beyond the traditional reification of practice in theory and verification of theory in practice. The ontology of this work is anchored in subjective individual meaning; the epistemological stance assumes that this meaning is socially constructed. Consequently, rich empirical data, grounded in the context of experiential evidence, is extracted from a comprehensive range of marketing constituencies: academics, practitioners, managers, consultants, authors, lecturers and students. In its examination of the polarities, hybridity and iterative flow of marketing knowledge creation and consumption, this text posits a cohesive argument for a theory/practice bipartite fusion not dichotomy, adding valuable insights into the textual, contextual and pedagogical representations of marketing knowledge. The history and future of marketing knowledge is examined with the aid of instructive illustrations and insightful first-hand experience. Drawing on extensive qualitative research from a broad range of influential producers and vital consumers, Dr. Smith presents a relevant, exciting marketing knowledge framework which will be a vital resource for academics, students and practitioners.

It is difficult to speak about Europe today without reference to its constitutive regions—supra-national geographical designations such as “ Scandinavia, ” “ Eastern Europe, ” and “ the Balkans. ” Such formulations are so ubiquitous that they are frequently treated as empirical realities rather than a series of shifting, overlapping, and historically constructed concepts. This volume is the first to provide a synthetic account of these concepts and the historical and intellectual contexts in which they emerged. Bringing together prominent international scholars from across multiple disciplines, it systematically and comprehensively explores how such “ meso-regions ” have been conceptualized throughout modern European history.

In post-industrial societies more and more people earn an income in creative knowledge work, a highly flexible labour market segment that demands a geographically mobile workforce. Creative knowledge work is based on an understanding of language, culture and symbolic meanings. This can best be obtained through local and national embeddedness. Yet, this necessity for embeddedness stands in contrast to the demand in geographical mobility. How is this contradiction solved by individuals? What new forms of place attachment does this bring about? This book introduces a showcase of 25 multilocal creative knowledge workers, who live in different countries at the same time. It investigates how continuous mobility becomes part of their lifeworld, and how it changes their feelings of belonging and practices of place attachment. Applying an innovative methodological mix of social phenomenology, hermeneutics and mental mapping, this book takes a detailed look at biographies and the role of places in mobile lifeworlds. Plug&Play Places brings forth the idea that places have to be understood as individual items, which are configured and then plugged into the 'system' of the own lifeworld. They can be 'played' without great effort once an individual needs to make use of them. This new type of place attachment is a form of subjective standardization of place, which complements the well-known models of objective standardization of places. Plug&Play Places is relevant for scientists who deal with mobility and its impact on individual lifeworlds, with transnational multilocality and with flexibilized labour markets. Furthermore, the book provides a detailed qualitative perspective which can enrich the explanations of quantitative research in the same field. It is an interesting reading also for practitioners engaged in urban planning, housing and real estate development. Robert Nadler holds a doctoral degree in Urban and Local European Studies from the University of Milan-Bicocca. He is a researcher at the Leibniz Institute for Regional Geography and published on creative industries, multilocality and labour mobility.

Disruptive digital technologies are poised to reshape world energy markets. A new wave of industrial innovation, driven by the convergence of automation, artificial intelligence, and big data analytics, is remaking energy and transportation systems in ways that could someday end the age of oil. What are the consequences—not only for the environment and for daily life but also for geopolitics and the international order? Amy Myers Jaffe provides an expert look at the promises and challenges of the future of energy, highlighting what the United States needs to do to maintain its global influence in a post-oil era. She surveys new advances coming to market in on-demand travel services, automation, logistics, energy storage, artificial intelligence, and 3-D printing and explores how this rapid pace of innovation is altering international security dynamics in fundamental ways. As the United States vacillates politically about its energy trajectory, China is proactively striving to become the global frontrunner in a full-scale global energy transformation. In order to maintain its leadership role, Jaffe argues, the United States must embrace the digital revolution and foster American achievement. Bringing together analyses of technological innovation, energy policy, and geopolitics, Energy's Digital Future gives indispensable insight into the path the United States will need to pursue to ensure its lasting economic competitiveness and national security in a new energy age.

The Middle East captured front pages worldwide for the alleged Arab Spring in 2011. Large segments of the populations of Tunisia, Libya, Egypt, and Syria took to the streets to voice their protest against autocratic regimes and to demand democracy. Violent uprisings followed, but the prospects of liberal democracy are still uncertain and distant. No wonder. Democratization took a couple of centuries in the West. And even today, well-established Western democracies are under pressure from globalization and regionalization, and many claim representative democracy is in need of renewal. This collection of essays focuses on a number of theoretical issues associated with

## Download Free Munich Personal Repec Archive Von Der Lippe

democracy and democratization. Divided into three parts, the first part analyzes how democracy may be understood, explained and measured. The second part deals with issues of democracy, international stability, and development in fragile and developmental states and regions. The third part of the book looks at representative democracy in old democracies and its potential for development.

As a rapidly rising force in the global market, Asian countries hold opportunities for growth and development. However, in order to successfully gain entry into this new part of the market, it will first be necessary to understand the motives and background behind Asian economies. *Asian Business and Management Practices: Trends and Global Considerations* analyzes the various strategies found in the Asian economic market. Showcasing a broad range of countries in Southeast Asia in addition to China and India, this publication is a broad, widely encompassing resource for academics, PhD students, experts, policymakers, and government officials interested in understanding the background and applications behind business success in Asia.

A joint production by six international organizations, this manual explores the conceptual and theoretical issues that national statistical offices should consider in the daily compilation of export and import price indices. Intended for use by both ...
