The Romans recorded their music using a Greek method which consisted of four letters corresponding to four notes with rhythm signs above each note that indicated their length. Unfortunately, very little Roman music has survived. There are more surviving written recordings of ancient Greek music than of Roman.

"This chapter provides an overview of the Muses in Greek mythology and argues that their multiplicity, their indefinite number, their lack of fixed personalities and their metapoetic status make them highly unusual members of the Olympian pantheon. As the embodiment of music and the means by which music is channelled to human beings they are essential to our understanding of the meaning of mousik in Greek culture. Is music just matter of hearing and producing notes? And is it of interest just to musicians? By exploring different authors and philosophical trends of the Roman Empire, from Philo of Alexandria to Alexander of Aphrodisias, from the rebirth of Platonism with Plutarch to the last Neoplatonists, this book sheds light on different ways in which music and musical notions were made a crucial part of philosophical discourse. Far from being mere metaphors, notions such as harmony, concord and attunement became key philosophical tools in order to better grasp and conceptualise fundamental notions in philosophical debates from cosmology to ethics and from epistemology to theology. The volume is written by a distinguished international team of contributors.

In Greek mythology, the Muses are Memory's daughters. Their genealogy suggests a deep connection between music and memory in Graeco-Roman culture, but how was this connection understood and experienced by ancient authors, artists, performers, and audiences? How is music remembered and how does it memorialize in a world before recording technology, where sound accumulated differently than it does today? This volume explores music's role in the discourses of cultural memory, communication, and commemoration in ancient Greek and Roman societies. It reveals the many and varied ways in which musical memory formed a fundamental part of social, cultural, ritual, and political life in ancient Greek- and Latin-speaking communities, from classical Athens to Ptolemaic Alexandria and ancient Rome. Drawing on the contributors' interdisciplinary expertise in art history, philology, performance studies, history, and ethnomusicology, eleven original chapters and the editors' Introduction offer new approaches for the study of Graeco-Roman music and musical culture.

Where does music come from? What kind of agency does a song have? What is at the root of musical pleasure? Can music die? These are some of the questions the Greeks and the Romans asked about music, song, and the soundscape within which they lived, and that this book examines. Focusing on mythical narratives of metamorphosis, it investigates the aesthetic and ontological questions raised by fantastic stories of musical origins. Each chapter opens with an ancient text devoted to a musical metamorphosis (of a girl into a bird, a nymph into an echo, men into cicadas, etc.) and reads that text as a meditation on an aesthetic and ontological question, in dialogue with 'contemporary' debates – contemporary with debates in the Greco-Roman culture that gave rise to the story, and with modern debates in the posthumanities about what it means to be a human animal enmeshed in a musicking environment.
