create a software project for a Nios II processor system in an Altera FPGA and run the software project on your development board. The Nios® II processor core is a soft intellectual property (IP) processor that you download (along with other hardware components that comprise the Nios II system) onto an Altera FPGA. This tutorial introduces you to the basic software development flow for the Nios II processor. In the tutorial, you use a simple, pre-generated Nios II

Getting Started with Intel® FPGAs

Posted: (3 days ago) Goals/Warning: This tutorial approaches a superficial "first contact" with the design with SoC + FPGA, if you need more information about the peripherals, it's better to ask in the altera's forum where gently guys will try to help you with your idea. My goals with this tutorial it's not to explain all, but the hardest part of ever development, the kick-off to understand the ...

This tutorial provides comprehensive information that will help you understand how to create a microprocessor system on your FPGA development board and run software on it. This system is based on the Altera Nios II processor. Later I will show how to use the Nut/OS on the Nios II. The tutorial is divided in the following sessions:
